- APP DESCRIPTION

About Practo app (Features):- Practo has created a platform that allows patients to communicate with healthcare professionals, doctors, and nurses. This app is one of the fastest growing healthcare software which provides a platform for patients to connect with their required healthcare experts. The technology is developed to keep patients' data secure through cloud technology. This ensures that online patient records are always up to date and easily available to healthcare practitioners. The service users can book new appointments, check their treatment progress or corresponding records, and take care of accounting and payment services that can be performed online.

EXISTING FEATURES:-

- Patient can only search the doctor according to the their requirement and also search the many type of doctor like that Dentist , Ayurveda.
- Patient can only search the medicine name but patient can not buy the medicine.
- User can only how much calorie they should take based on their health.
- Patient can only select the doctor and book the Appointment.
- Body Mass Index is not available

REDESIGN AND NEW FEATURES

Use BMI(Body Mass Index) to find user are healthy or not (weight and height).

For few Guidance Consult a Doctor over chat/call/video conferencing instantly(Virtual assistant).

Patient can easily get idea about their food(Daily uses) from Scan image of food.

To get free of cost service for poor patients from doctor, we will tie-up with any Trust.

KEY ACTIVITIES

- Online consultation
- Medicine delivery
- Technological setup
- Managing doctors and clinics

KEY PARTNERS

- Doctors
- Clinics and hospitals
- Pharmacies
- Associated labs
- Insurance companies

KEY RESOURCES

- Website
- Practo App
- Information technology

VALUE PROPORTION

For patients

- Online healthcare search facility
- Practo plus online doctor consultation
- Medicine information
- Doorstep delivery of medicines

For Doctors & Clinics

- Practo Ray
- Practo Prime
- Practo Consult

For Hospitals

- Practo Insta
- Practo Qikwell
- Practo Querent

CHANNELS

- WEBSITE
- SOCIAL MEDIA
- BLOGS

COST STRUCTURE

- Technology
- Ad and promotion expenses
- Salaries to staff
- Misc. expenses

CUSTOMER RELATIONSHIP

- Personal assistance
- Automated services

REVENUE STREAMS

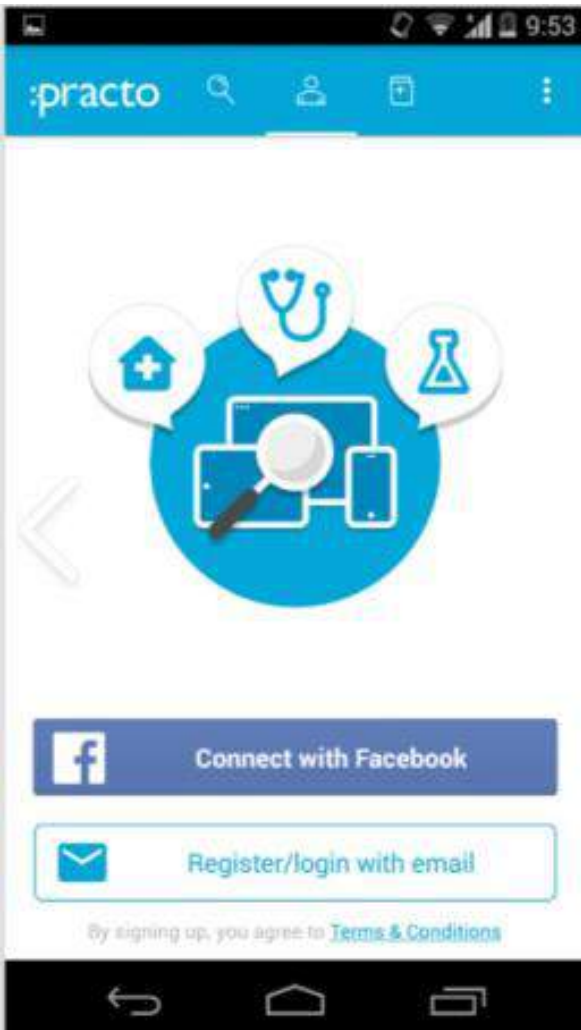

- Sale of software
- Commission of consultation and delivery
- Advertisements

Practo Business Model

REDESIGNING FEATURE

SEARCHING SPECIALIST DOCTOR PAGE

EXISTING FEATURE

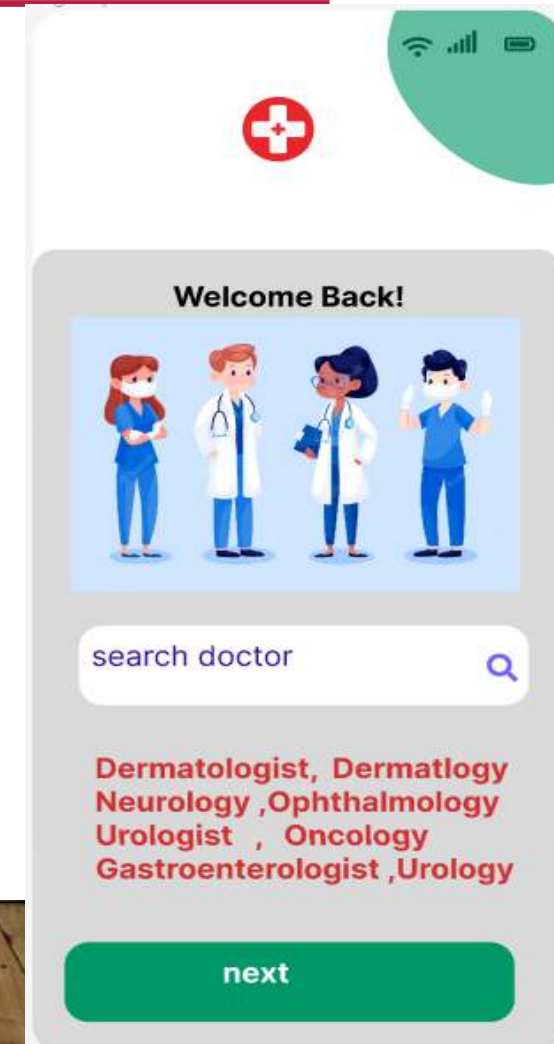

EXISTING AND REDESIGNING FEATURE

EXISTING FEATURE :- In original design ,patient can only search the doctor according to the their requirement and also search the many type of doctor like that Dentist , Ayurveda

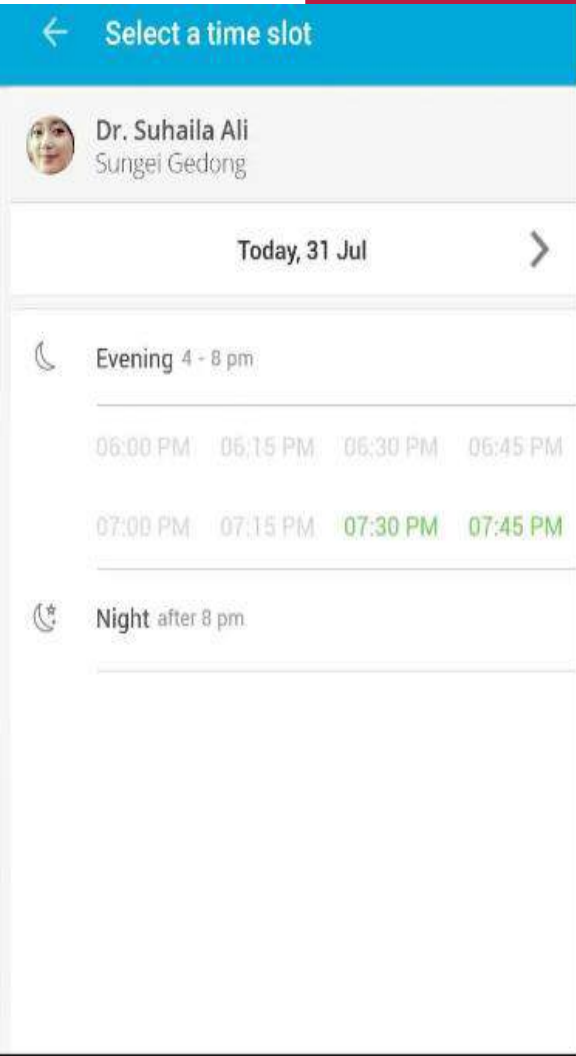

REDESIGNING FEATURE:- In new design patient can only search the type of doctor according to the their requirement and then go next step to book appointment

REDESIGNING FEATURE

DOCTOR DETAILS PAGE

EXISTING FEATURE

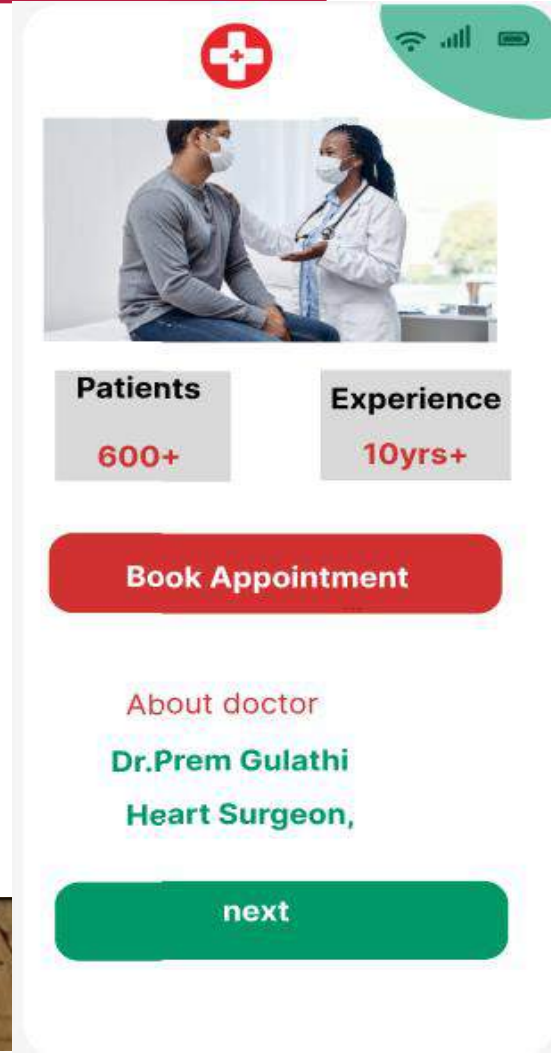

EXISTING AND REDESIGNING FEATURE

EXISTING FEATURE:- In original design patient can only select the doctor and book the Appointment ,Patient can see experience and how many patient under this doctor, patient can see the slot timing

REDESIGNING FEATURE :- In new design patient can only see the doctor history and name and experience and type of doctor ,Then book Appointment

REDESIGNING FEATURE

SCHEDULING APPOINTMENT WITH DOCTOR PAGE

EXISTING AND REDESIGNING FEATURE

EXISTING FEATURE

EXISTING FEATURE:-In original design patient can see the doctor name and about doctor and choose the date and day for Appointment and then finally book the Appointment

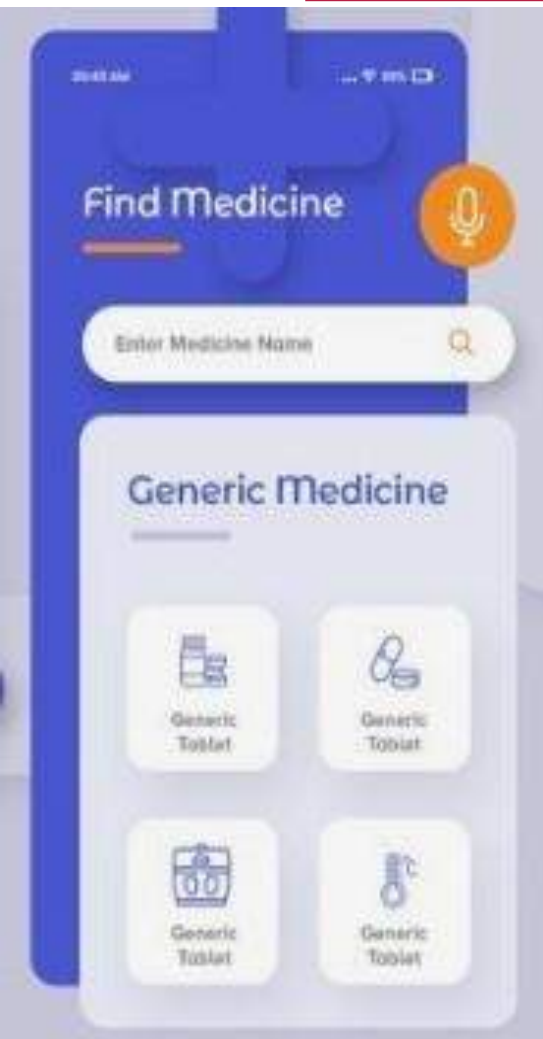

REDESIGNING FEATURE :-In new design patient can see the appointment date and day and call doctor through the online text ,video conferencing call or through the whatsapp

REDESIGNING FEATURE

ORDERING PRESCRIPTED MEDICINE PAGE

EXISTING FEATURE

EXISTING AND REDESIGNING FEATURE

EXISTING FEATURE:-In original design patient can only search the medicine name but patient can not buy the medicine

REDESIGNING FEATURE :-In new design patient can search and type of medicine and book and buy the medicine

REDESIGNING FEATURE

CALCULATING BMI (NEW FEATURE)

NEW ADDED FEATURE

We will add a new feature to calculate the BMI of the patient based on their weight and height. They just have to enter their height and weight in the BMI calculator. The calculator will tell whether the person is overweight or under-weight. A further diet plan will be suggested by doctors based on the BMI.

SUGGESTED DIET-PLAN BASED ON BMI

EXISTING FEATURE

EXISTING AND REDESIGNING FEATURE:-

EXISTING FEATURE:- The existing feature in practo app is User can only know how much calorie they should take based on their health but User can not Scan their food to get information about calorie and they can not find their food calorie which they are taking in breakfast, lunch, snacks and dinner

REDESIGNING FEATURE:-The Redesigning features in practo app is User can know how much calorie they should take based on their health and User can Scan their food to get information about calorie and they can find their food calorie which they are taking in breakfast, lunch, snacks and dinner and also User will get notification how much Calorie's food they can take.

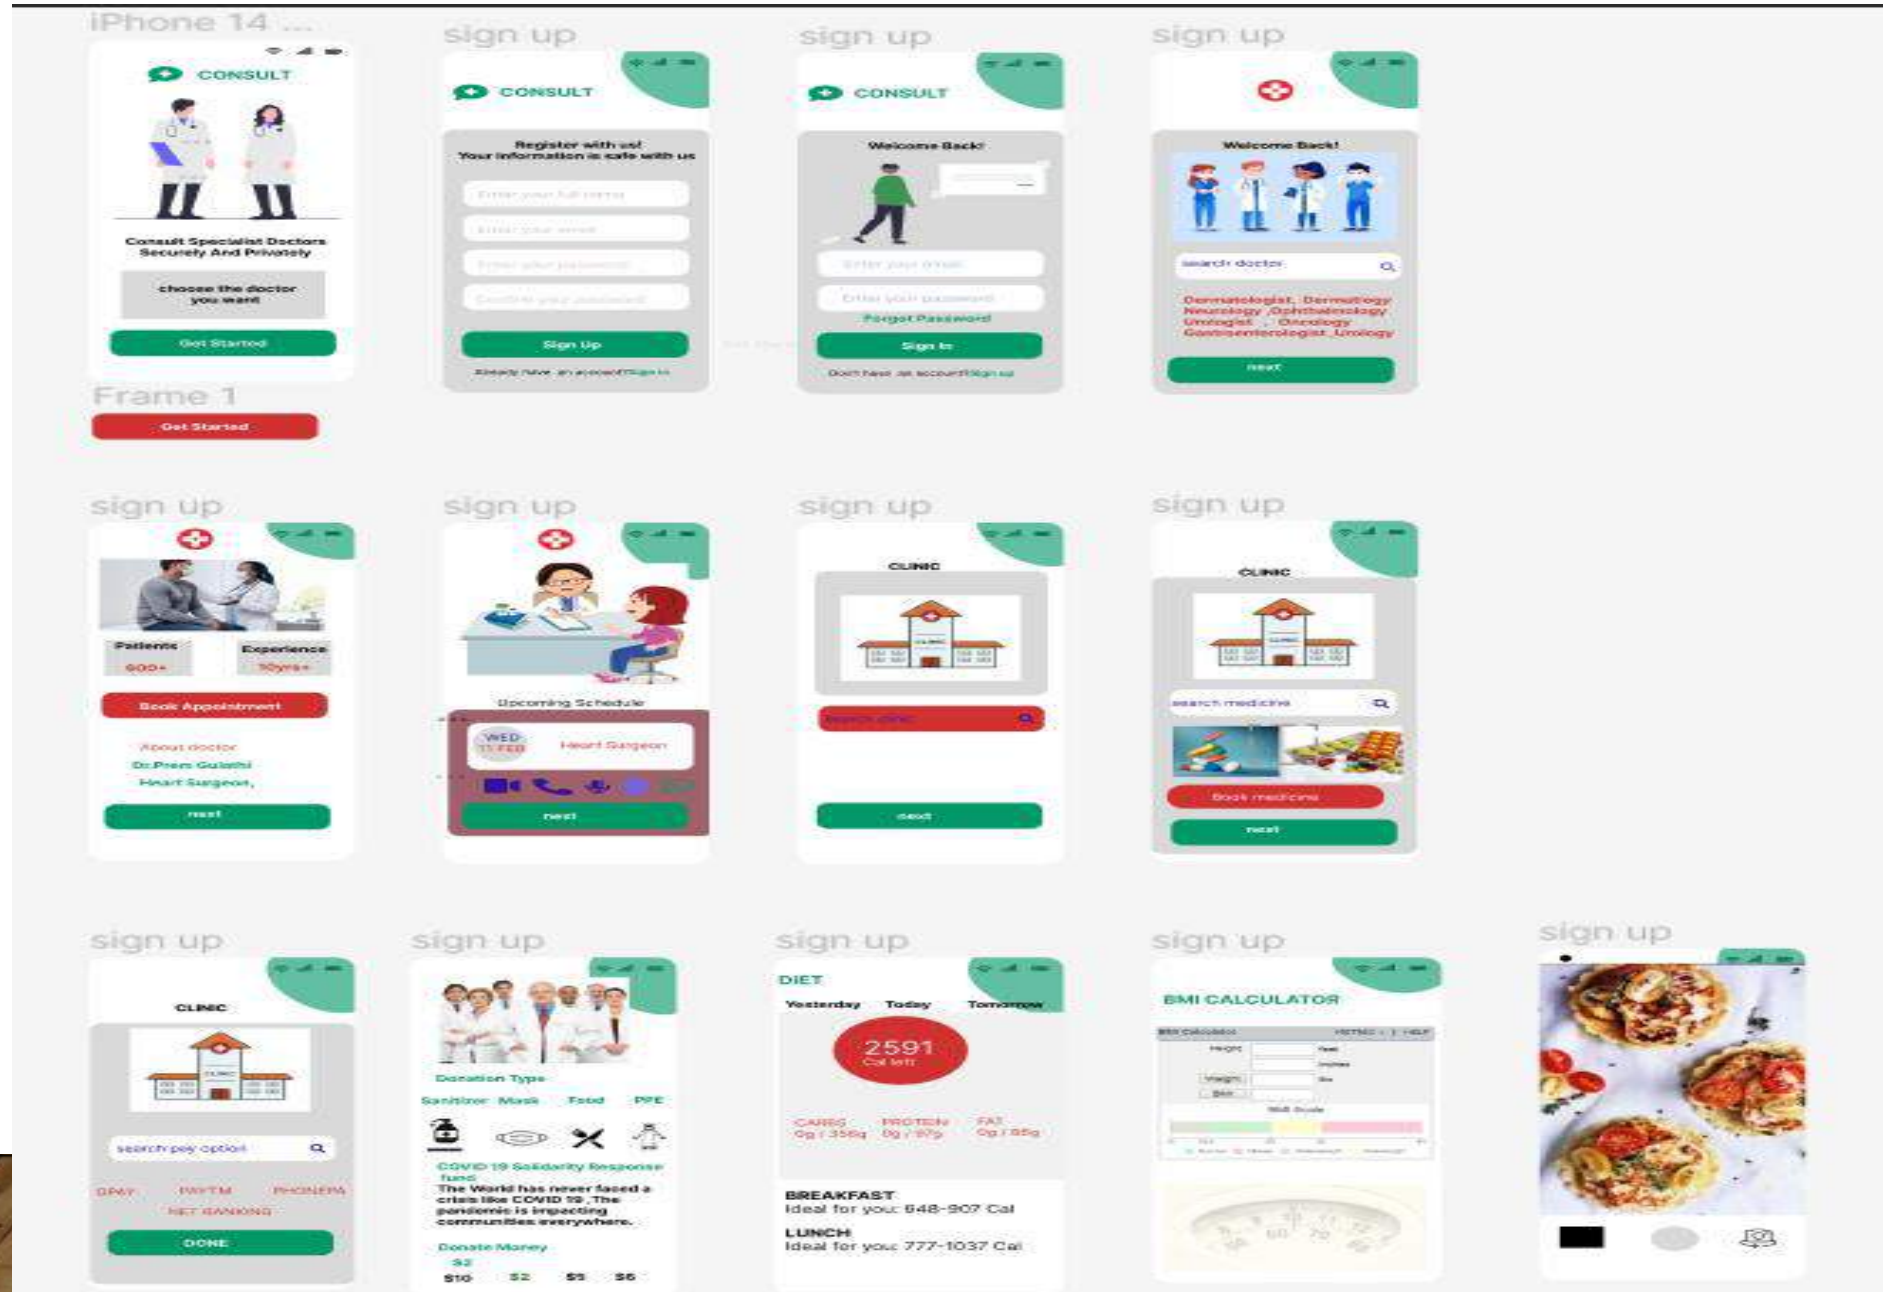

REDESIGNING FEATURE

USABILITY DESIGN OF SOFTWARE
APPLICATION

APP NAME:-

DOCTOR CONSULTING APP-PRACTO

TEAM MEMBERS :-

- 1) ATUL ANURAG 20BBS0095
- 2) SAHIL BHARTI 20BBS0059
- 3) PRIYESH KUMAR SINGH 20BBBS0010
- 4) PREM KUMAR 20BBBS0077

Introduction:-

Practo has created a platform that allows patients to communicate with healthcare professionals, doctors, and nurses. This app is one of the fastest growing healthcare software which provides a platform for patients to connect with their required healthcare experts. The technology is developed to keep patients' data secure through cloud technology. This ensures that online patient records are always up to date and easily available to healthcare practitioners. The service users can book new appointments, check their treatment progress or corresponding records, and take care of accounting and payment services that can be performed online.

FUNCTIONAL AND NON FUNCTIONAL REQUIREMENT

FUNCTIONAL REQUIREMENT (USER REQUIREMENT)

- 1) End user wants add video conferencing and audio call in the practo app
- 2) Connect some clinic with NGO where patient can buy the medicine in free
- 3) Add the WhatsApp feature in practo app so that doctor send the medicine name through the WhatsApp and connect with patient
- 4) Add BMI (body mass Index) feature so that patient can monitor if they are under weight or over weight
- 5) Add one time table where doctor mention the quantity of medicine and intake time

NON FUNCTIONAL REQUIREMENT

- 1) Performance of practo app should be good and give quick response
- 2) Practo app should be user-friendly
- 3) Practo app should be easily understandable for the user
- 4) should be flexibility
- 5) Practo app should give more security for the patient and Doctor
- 6) Should be portability
- 7) Pracro app does not take more time to open in the phone or laptop

How Practo makes money?

Any company thinks of how to increase revenues and hence generate more profits. Practo also has its way to make huge revenue. We know that Practo has a few products and services and using this they generate the revenue.

They initially started by taking a certain percentage of money for every booking that takes place. As they expanded, they found more opportunities to get better revenues.

Practo charges the doctors and hospitals some money for getting listed in the app or the website. This also gives them some revenue. They are now expanding their domain and are now connecting bigger hospitals, labs and [pharmacies](#) and take commissions from all these. This is their basic revenue model. Over this, there are a few other ways by which they generate revenue.

Acquisitions of Practo

They get revenues through their [acquisitions](#). Practo has acquired 4 companies.

- QikWell: It is an online appointment booking software
- FitHo: It is a disease prevention app
- Genoo: A software development firm
- InstaHealth: Hospital management software

Revenue Model of Practo

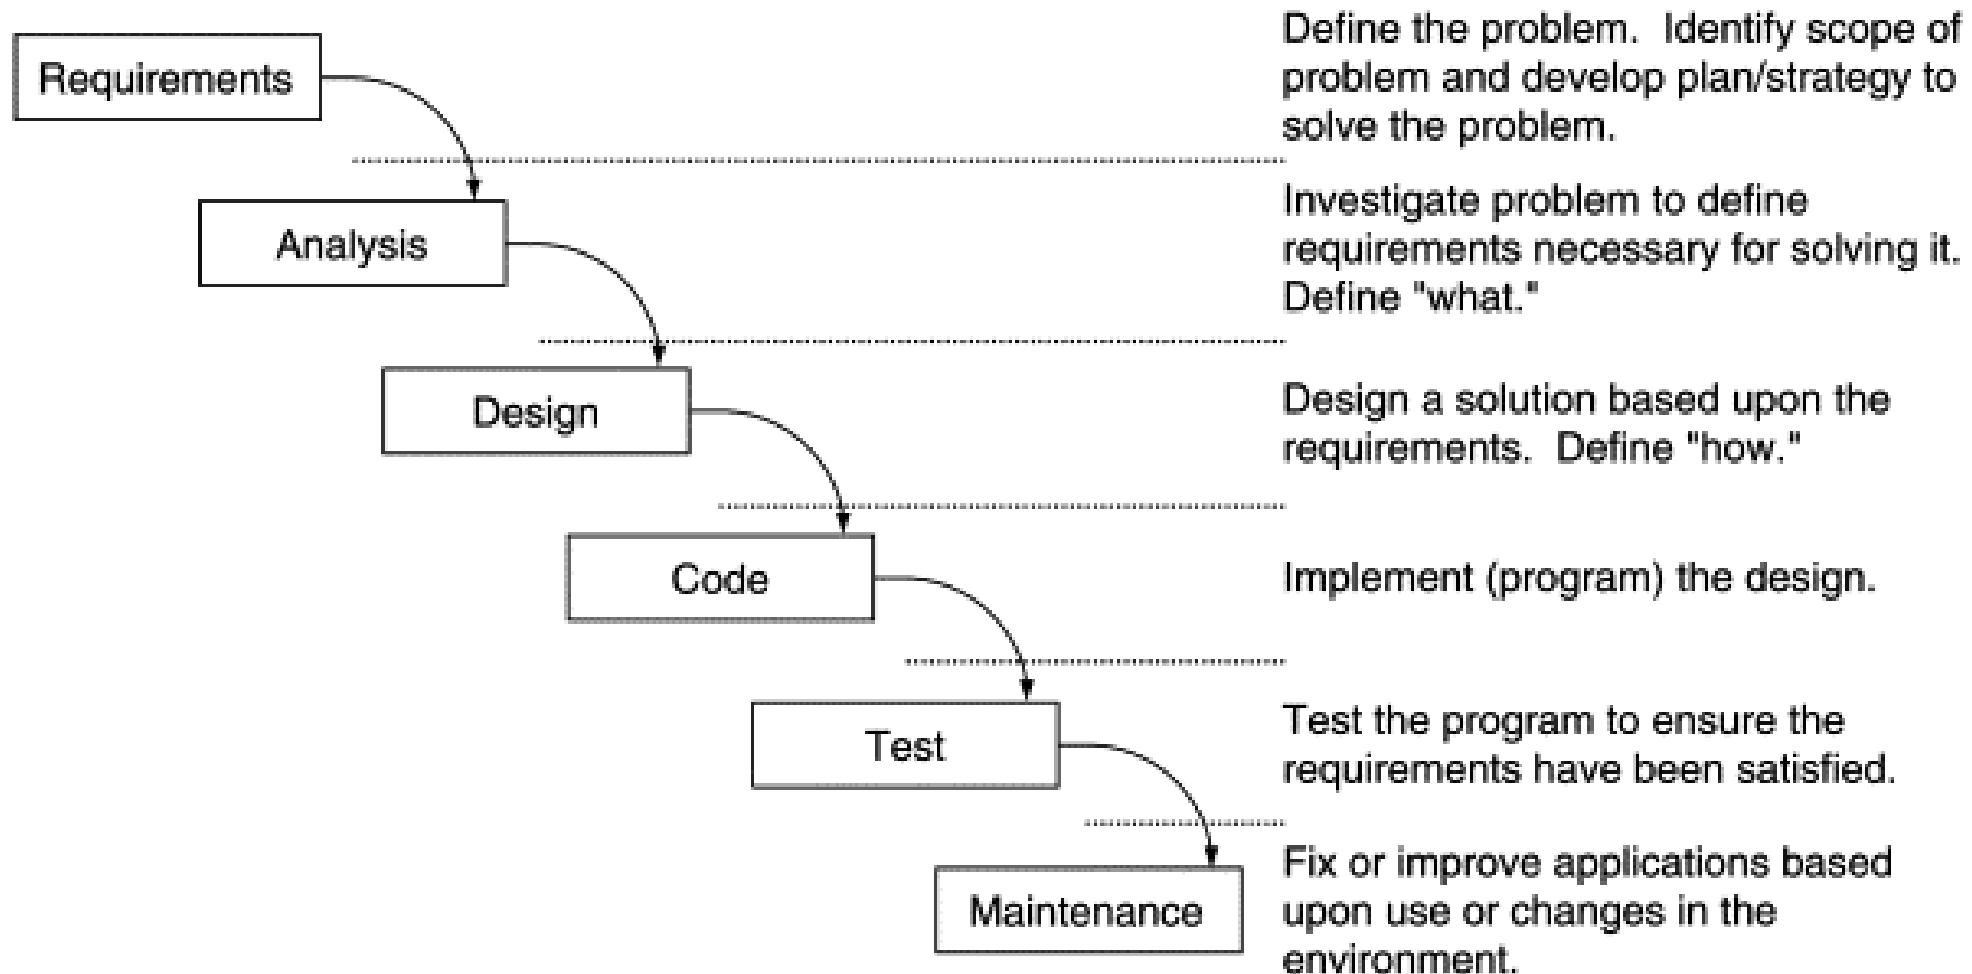

Practo Plus: It is a [subscription-based](#) yearly healthcare plan for patients. It offers unlimited online doctor consultation and Practo gets some revenue from this too.

Practo Ray: This helps the doctors Manage the hospital or clinic. It is a PMS (Practice Management Software) for the doctors. For doctors to use this, they need to pay a fee, monthly. This is the largest source of revenue for Practo.

[Doctors](#) need to get on top of the list to be able to do more online consultations and hence earn more. Practo Profile sells premium listing and for this, the doctors have to pay some money. This is a part of their revenue.

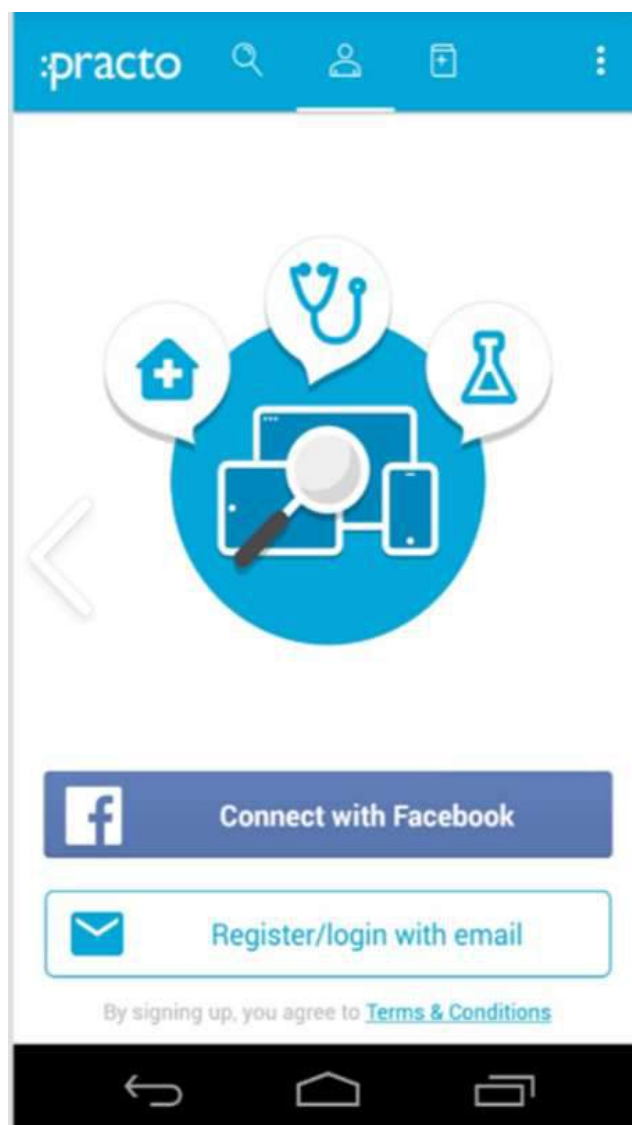

The main reason for Practo to be able to [attract the customers](#) is because they can cover the right audience. They know that there is no big point in covering famous doctors as they would have already established themselves and would not pay much for Practo and so, they started by approaching new doctors and clinics who will need to get patients. Also, there are not many competitors in the field as Practo has already attracted most doctors and patients and it is well established.

WATERFALL MODEL

DESIGN

OLD

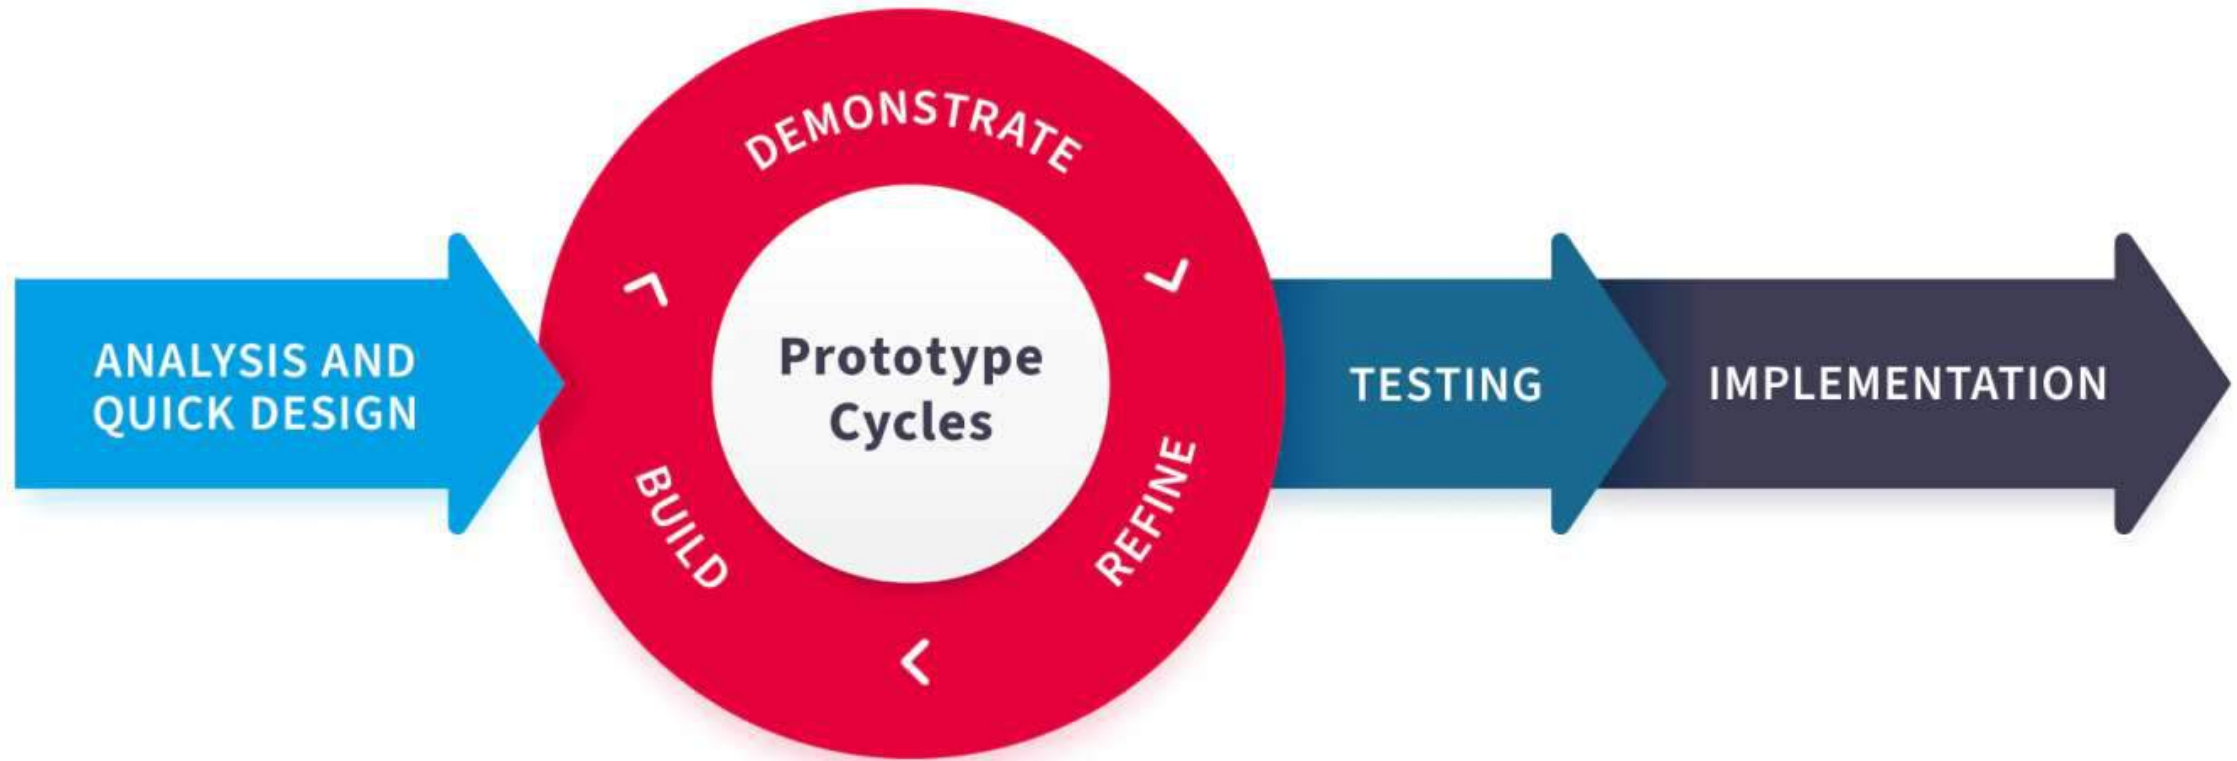

The following are the main activities that take place during the design phase in the waterfall model:

1. System architecture design: This involves defining the overall structure and organization of the system, including the relationships between the various components and modules.
2. Component design: This involves defining the specific details of each component and module, including the algorithms, data structures, and interfaces.
3. Database design: This involves defining the data structures and relationships, including the tables, fields, and relationships in the database.
4. Interface design: This involves defining the user interface, including the screen layouts, buttons, and navigation.
5. Prototype creation: A working prototype of the system may be created to demonstrate the proposed design and to gather feedback from stakeholders.

NEW

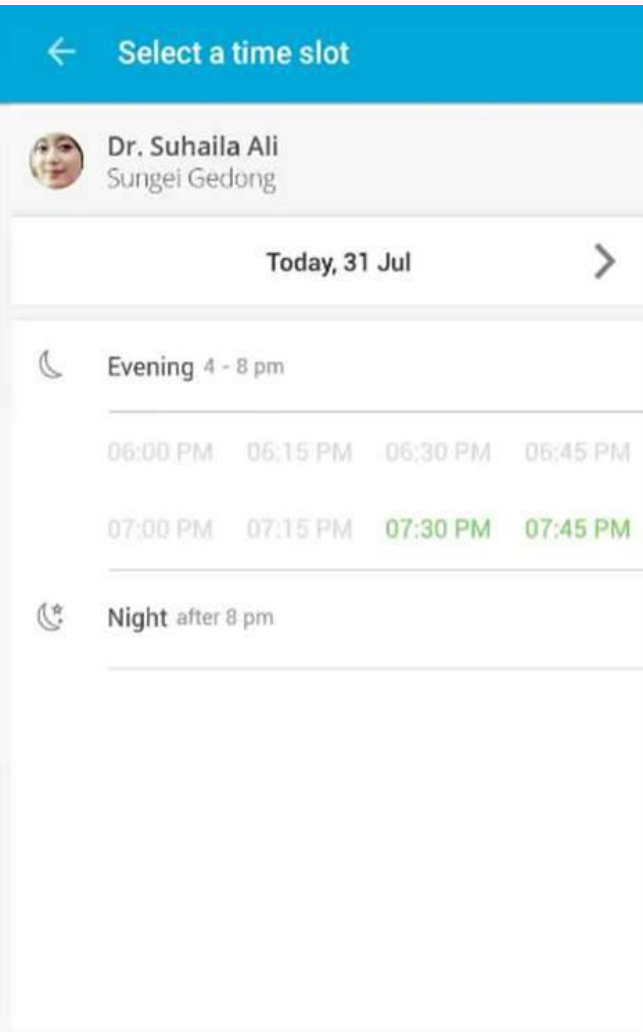

RAD

Old

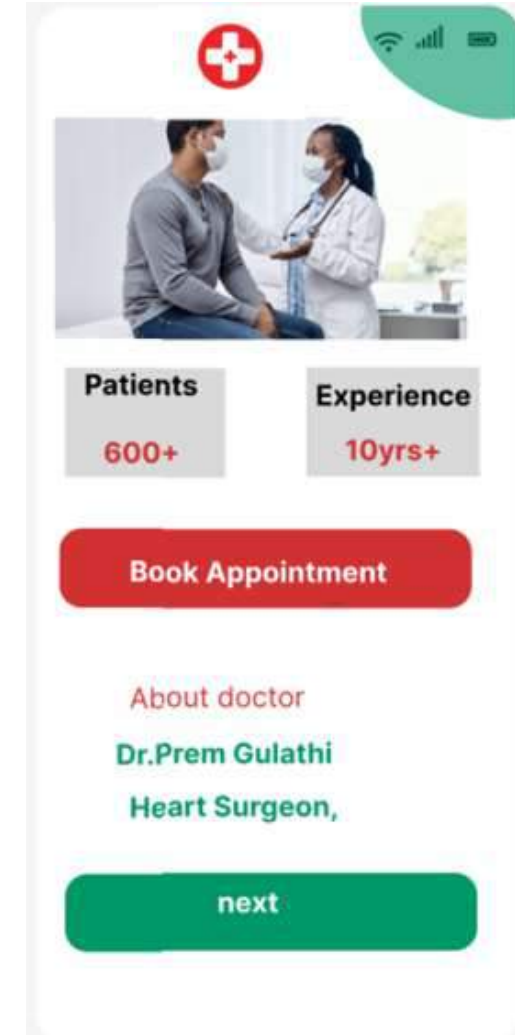

design in rad

new

The main objectives of the design phase in RAD are to:

1. Develop a working prototype: A working prototype of the software is created quickly to demonstrate the proposed design and gather feedback from stakeholders.
2. Refine the design: The design is refined and improved based on feedback from stakeholders and the results of testing the prototype.
3. Iterate: The design is continuously refined and improved throughout the development cycle until the final product is delivered.

The RAD (Rapid Application Development) and Agile model are used instead of the Waterfall model in certain situations because they offer several advantages over the traditional Waterfall approach. Some of the main reasons for using RAD or Agile models instead of the Waterfall model are:

- 1.Faster Development Time:** RAD and Agile models prioritize speed and flexibility, which allows for faster development times. This is especially important in fast-paced industries where time-to-market is critical.
- 2.Increased Collaboration:** Both RAD and Agile models prioritize collaboration between development teams, stakeholders, and customers, which leads to better alignment and higher-quality end products.
- 3.Better Adaptability:** RAD and Agile models are highly adaptable and allow for changes to be made to the development process mid-stream, which is critical in environments where requirements change frequently.
- 4.Improved Quality:** By breaking down the development process into smaller, more manageable chunks, RAD and Agile models allow for more frequent testing and improvement, leading to higher-quality end products.
- 5.Enhanced Customer Satisfaction:** RAD and Agile models prioritize customer involvement throughout the development process, leading to increased customer satisfaction and a better understanding of customer needs.

RAD MODEL

V/S

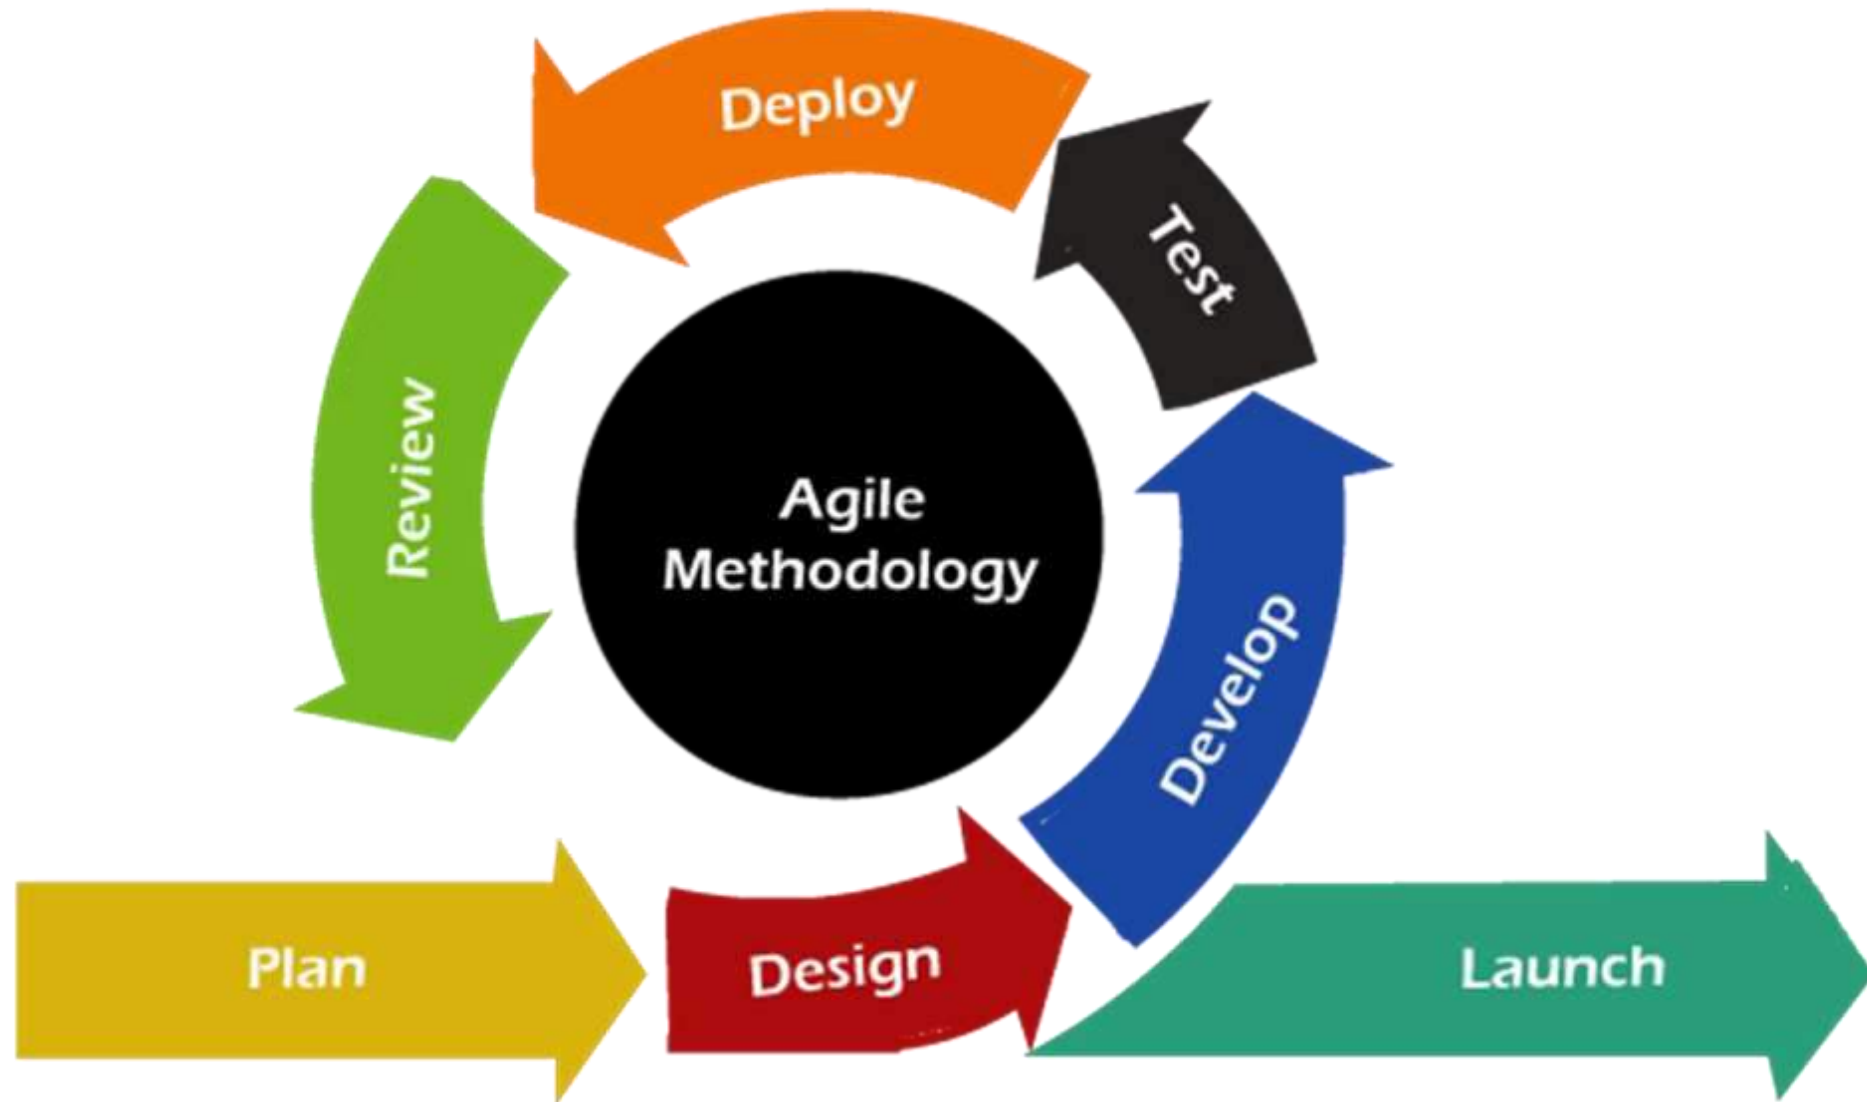

WATERFALL

Rapid Application Development

- If the requirements for the Practo app are less clear or subject to change, RAD may be a better choice.
- RAD is an iterative approach that emphasizes rapid prototyping and collaboration among all stakeholders, including developers, designers, and end-users.
- RAD may be suitable if there is a need for a quick turnaround time or for projects with evolving requirements.
- RAD may also be suitable if there is a need to gather feedback from end-users during the development process.

WATERFALL MODEL

- If the requirements for the Practo app are well-defined and the scope of the project is clear, the Waterfall model may be a suitable choice. This is because the Waterfall model is a linear, sequential approach that provides a clear roadmap for the entire software development process, making it easier to plan and manage.
- The Waterfall model may be suitable if the requirements are stable and unlikely to change, and if there is a strict timeline and budget.

AGILE MODEL

Requirements gathering and analysis

In this phase, you must define the requirements. You should explain business opportunities and plan the time and effort needed to build the project. Based on this information, you can evaluate technical and economic feasibility.

Design the requirements

When you have identified the project, work with stakeholders to define requirements. You can use the user flow diagram or the high-level UML diagram to show the work of new features and show how it will apply to your existing system.

Construction/ Iteration

When the team defines the requirements, the work begins. The designers and developers start working on their project. The aims of designers and developers deploy the working product within the estimated time. The product will go into various stages of improvement, so it includes simple, minimal functionality.

Deployment

In this phase, the team issues a product for the user's work environment.

Testing

In this phase, the Quality Assurance team examine the product's performance and look for the bug.

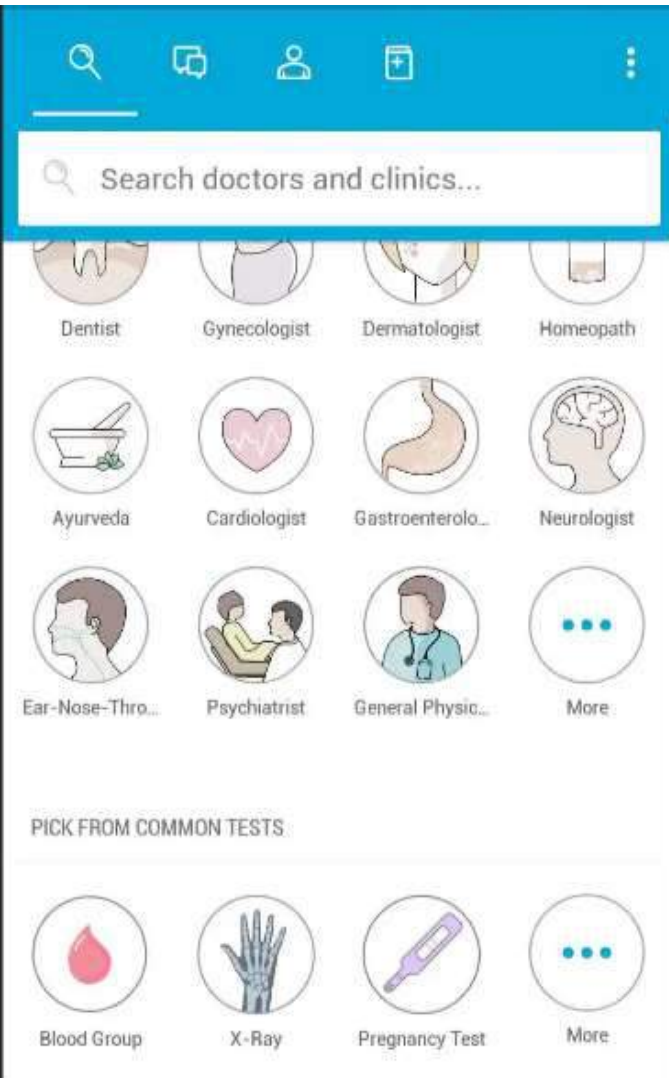

Feedback

After releasing of the product, the last step is to feedback it. In this step, the team receives feedback about the product and works through the feedback.

old

design in agile

new

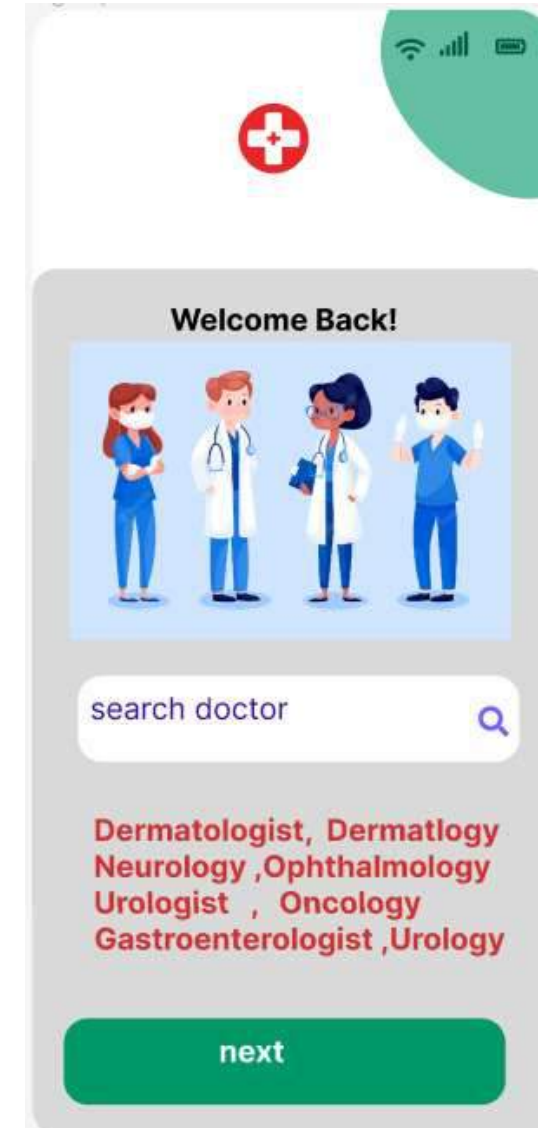

The main objectives of the design phase in Agile are to:

1. Develop a minimal viable product (MVP): The initial design focuses on creating a minimal working product that meets the most important needs of the stakeholders.

2. Refine the design: The design is refined and improved based on feedback from stakeholders and the results of testing the MVP.

3. Iterate: The design is continuously refined and improved throughout the development cycle until the final product is delivered.

Agile

vs

waterfall model

Agile

- Agile model allows for changes to be made throughout the development process based on customer feedback and changing requirements.
- In the case of the Practo app, the Agile model may be suitable if the requirements are not fully understood or if there is a need for continuous updates and improvements based on customer feedback.

Waterfall model

- In the case of the Practo app, the Waterfall model may be suitable if the requirements are well defined and the scope of the project is well understood.
- Waterfall model ensures that each phase of development is completed before moving to the next phase, which makes it easy to track progress, identify issues, and manage timelines.
- However, the Waterfall model does not allow for changes once the development process has started.

Types of Agile Methodologies

1. Agile Scrum Methodology

Scrum is a lightweight framework of Agile Project Management, it can be adopted to conduct iterative and all types of incremental projects.

2. Lean

It is the iterative, agile methodology that directs the team on addressing customer values by compelling value stream mapping, although, it is a deeply adaptable, emerging methodology with the absence of solid guidelines, laws, or methods

3. Kanban

Kanban is an eminently visual workflow management approach, famous amidst Lean teams, that can be employed for visualizing and thoroughly maintaining the making of products, it focuses on continual delivery of the product, but is not making stress to the entire software development life cycle

4. Extreme Programming(XP)

Generally being used with Scrum, it can focus on how Agile can increase customer satisfaction, instead of delivering at the entirety, the customer seeks for the near future, it provides them what they demand at present

5.Crystal

In actual, the Crystal Methodology is a class of small agile methodologies that incorporate ***Crystal Clear, Crystal Yellow, Crystal Red and many more***. Every methodology has its own specific framework. It is introduced by [Alistair Cockburn](#) while participated in writing the Agile manifesto for software development.

6.Dynamic System Development Method (DSDM)

DSDM gives a broad work-frame that is outlined;

- To plan, handle, execute, and scale the complete process of software development,*
- It directs on the business-driven approach and*
- It doesn't negotiate on quality and timely delivery.*

7.Feature Driven Development (FDD)

Being an iterative and accumulative development process, FDD is a lightweight, agile methodology to develop software. It mixes various industry-established best practices into united as a whole. These practices are encouraged in terms of a feature-first perspective while aiming at creating values for the client.

each time they forget the old
password.

NEW-REDESIGNED FEATURE

The image shows the new redesigned Practo sign-in page. It features a green header with the Practo logo and navigation icons. Below the header is the Practo logo again. There is a green 'CONSULT' button. Below the button is a 'Welcome Back!' message with an illustration of a person walking. There are two input fields: one for email (containing 'Enter your email') and one for password (containing 'Enter your password'). Below the password field is a green 'Forgot Password' link. A green 'Sign In' button is positioned below the 'Forgot Password' link. At the bottom, there is a link to 'Sign up'.

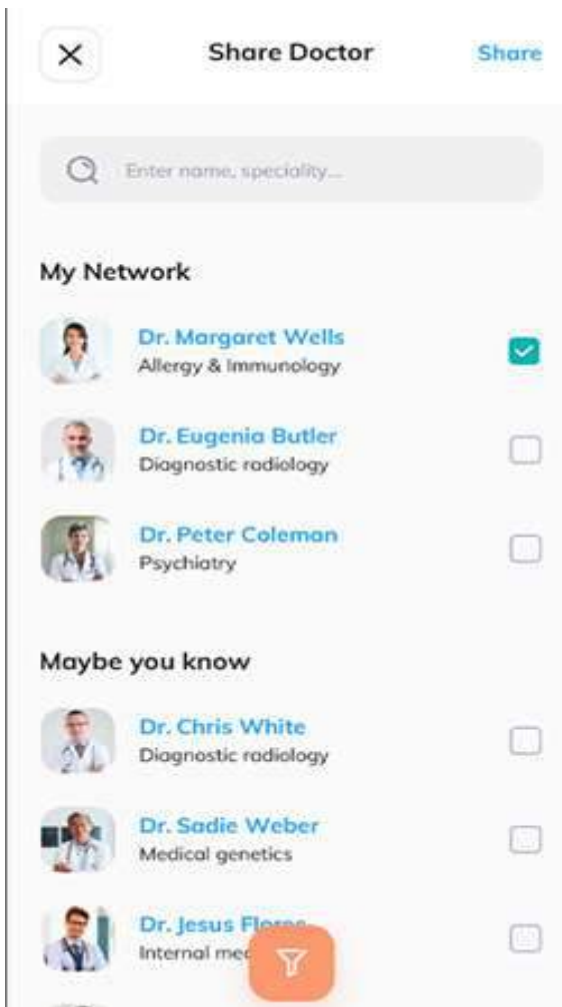

1

VISIBILITY OF SYSTEM STATUS

The system should always keep users informed about what is going on, through appropriate feedback within reasonable time.

 [Home](#) > [Furniture](#) > [Chairs](#)

•FEATURE

- The Practo app provides real-time updates on the availability of doctors and appointment slots.
- Users are notified when a booking is confirmed and when it is time for their appointment.
- Users can track the status of their appointments and receive reminders about upcoming ones.
- Users are shown the progress of their search for doctors or clinics, including the number of results and filters applied.
- The app displays the ratings and reviews of doctors to give users an idea of their reputation and experience.

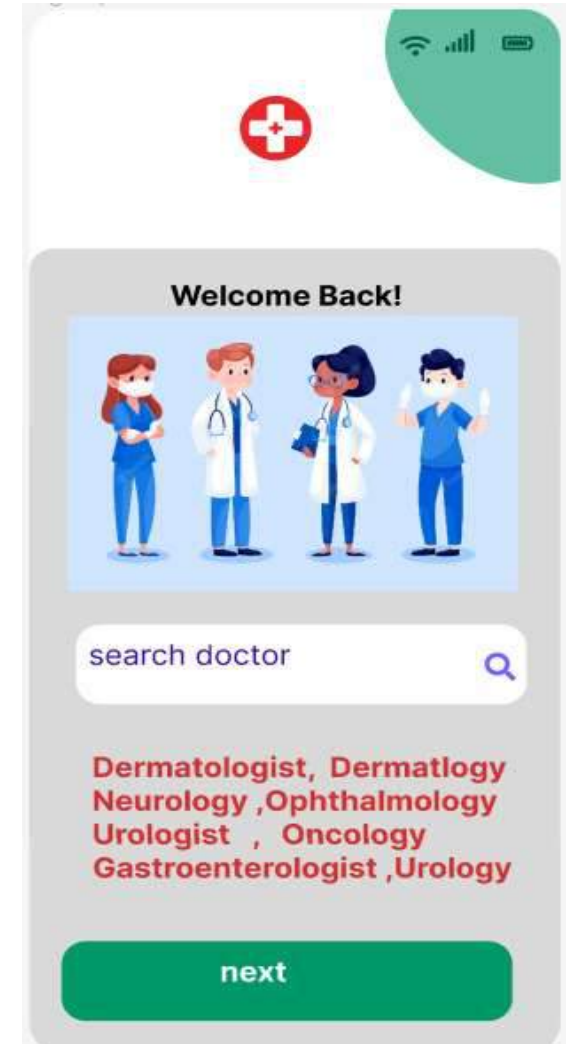

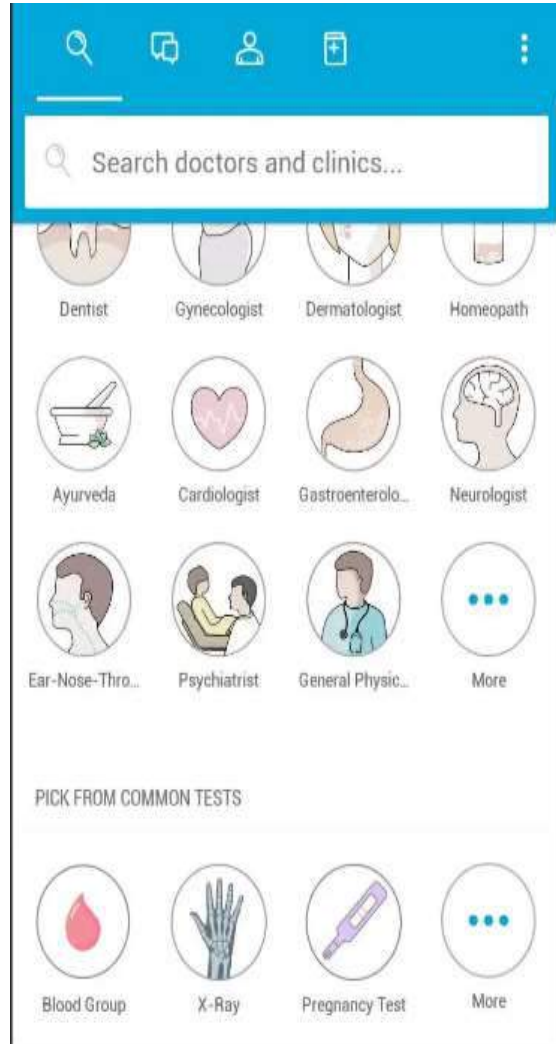

2 MATCH BETWEEN SYSTEM AND THE REAL WORLD

The system should speak the users' language, with words, phrases and concepts familiar to the user, rather than system-oriented terms. Follow real-world conventions, making information appear in a natural and logical order.

•FEATURE

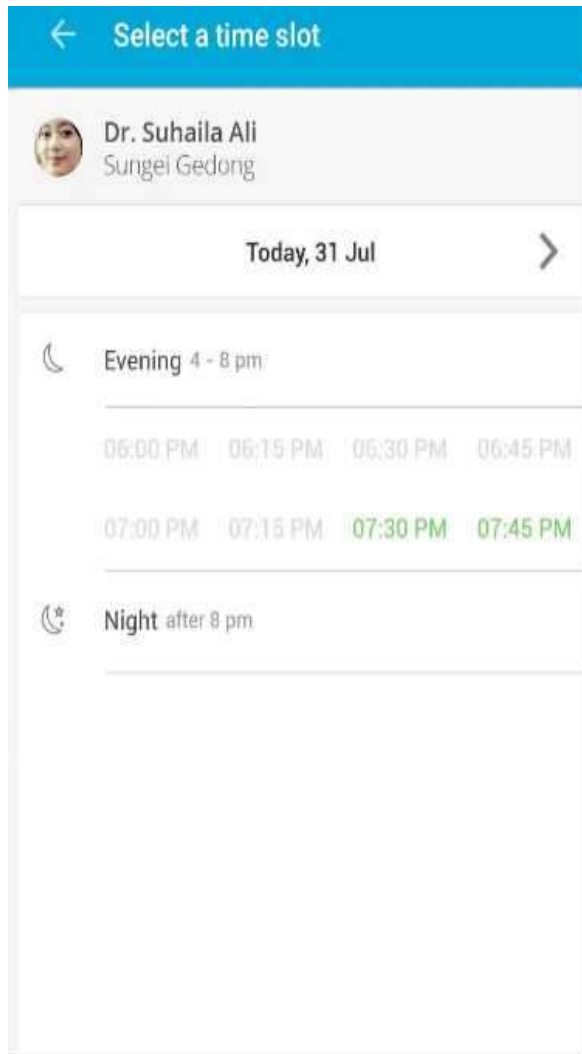

- The Practo app uses medical terminology that is familiar to users, such as the names of medical conditions and specialties.
- Users can search for doctors and clinics by location, making it easy to find healthcare providers in their area.
- The app displays the fees and availability of doctors, allowing users to choose a provider that fits their budget and schedule.
- The app provides information on the qualifications and experience of doctors, helping users make informed decisions about their healthcare.
- The app offers features such as online consultations and digital prescriptions, which align with modern healthcare practices.

3 USER CONTROL AND FREEDOM

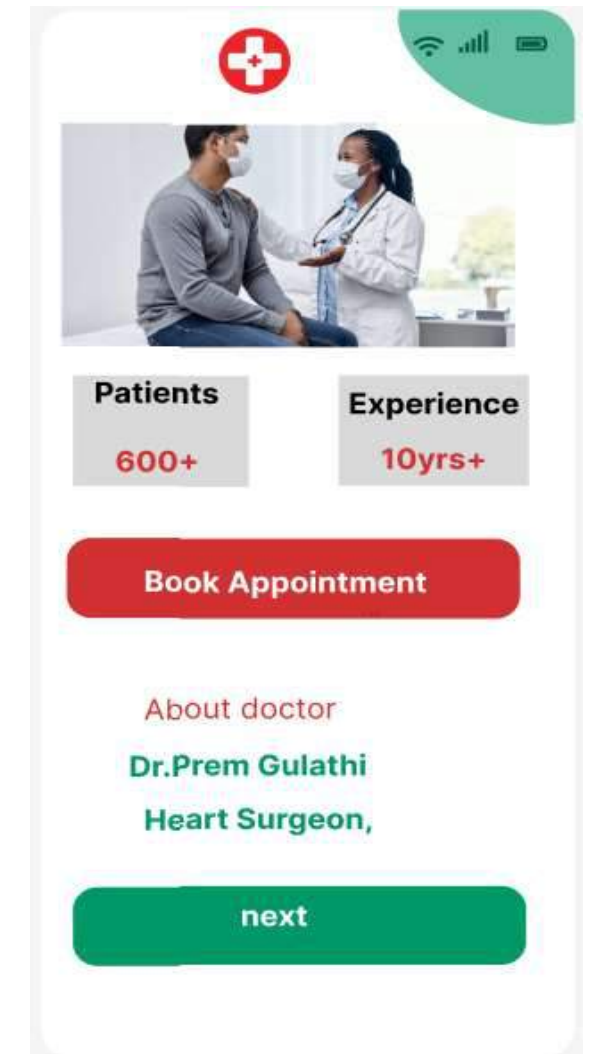

Users often choose system functions by mistake and will need a clearly marked "emergency exit" to leave the unwanted state without having to go through an extended dialogue. Support undo and redo.

•FEATURE

- The Practo app allows users to cancel or reschedule appointments with ease.
- Users can filter search results to find doctors that meet their specific requirements.
- The app provides a back button that allows users to easily navigate back to previous screens.
- Users can save doctors and clinics as favorites for quick access in the future.
- The app allows users to choose their preferred mode of payment, making it convenient for them to pay for their appointments.

4

CONSISTENCY AND STANDARDS

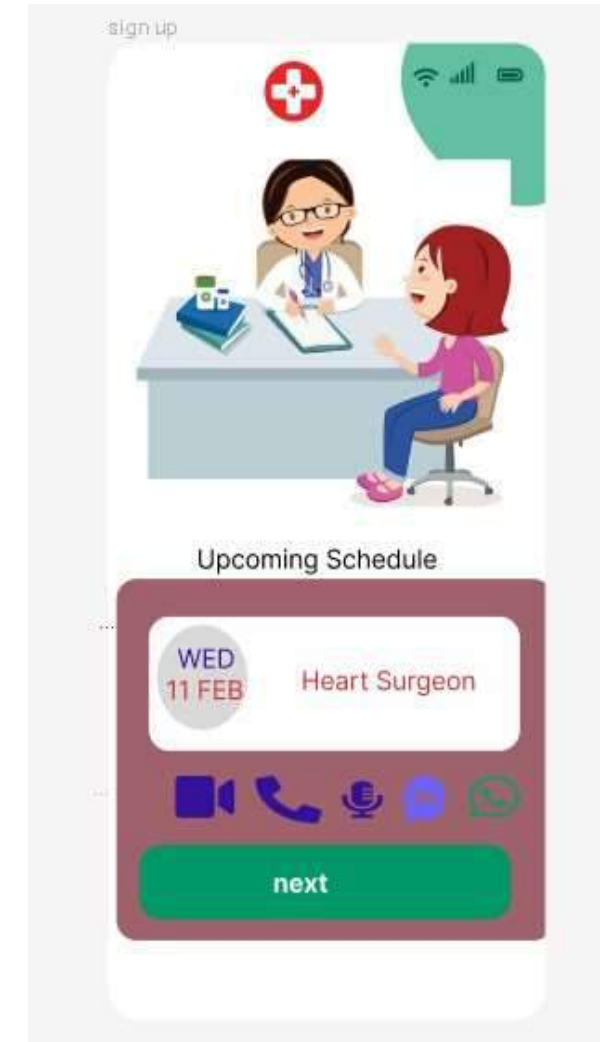

Users should not have to wonder whether different words, situations, or actions mean the same thing.

Golden rule: **Don't reinvent the wheel.**

•FEATURE

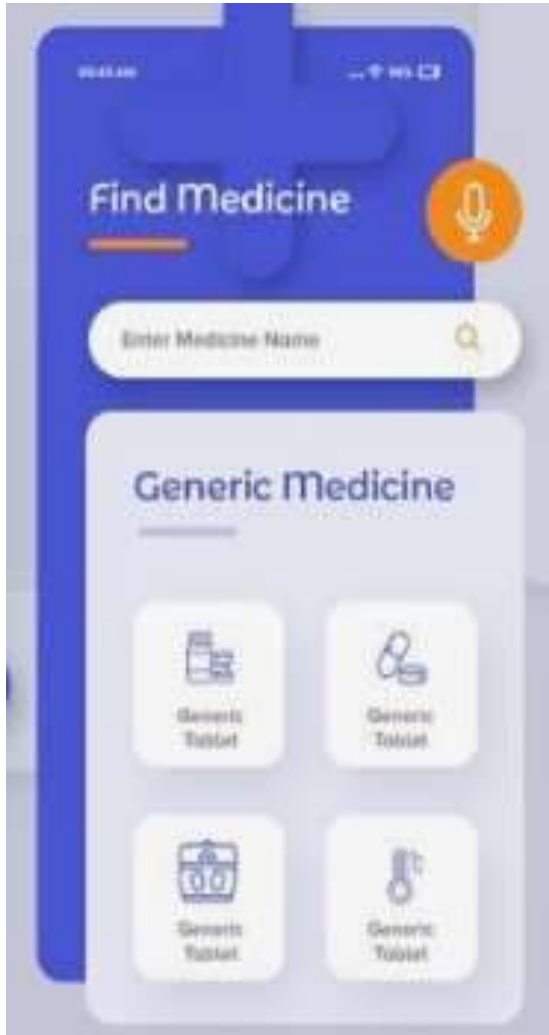

- The Practo app follows platform conventions, making it familiar to users of different devices and operating systems.
- The app uses a consistent design and layout throughout, making it easy for users to navigate and understand.
- The app uses a standard color scheme and typography, making it visually appealing and easy to read.
- The app provides consistent feedback to users, such as confirmation messages and error notifications.
- The app uses consistent terminology and labels, making it easy for users to understand the purpose and function of each feature.

5 ERROR PREVENTION

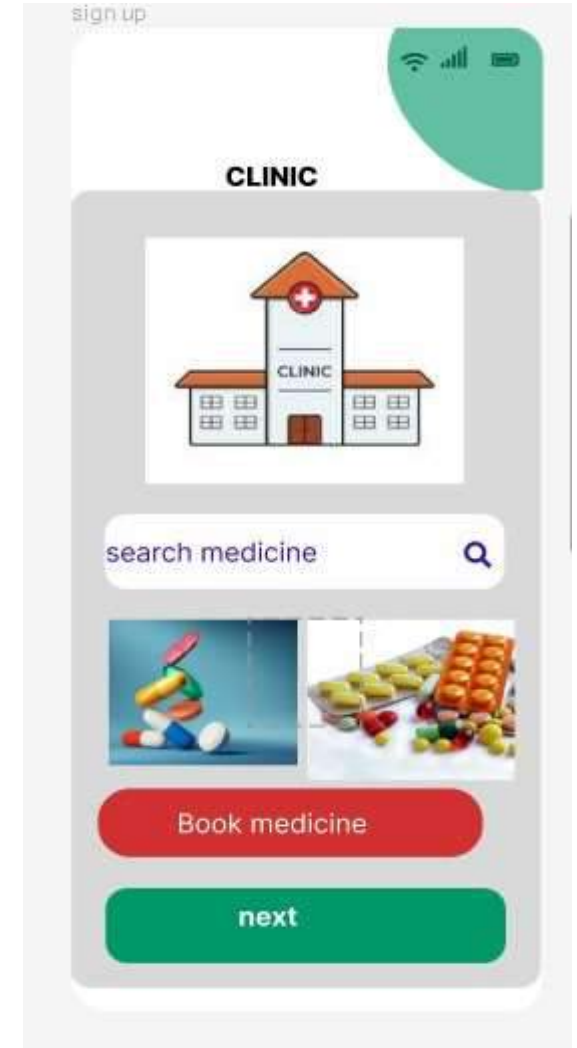

Even better than good error messages is a careful design which prevents a problem from occurring in the first place. Either eliminate error-prone conditions or check for them and present users with a confirmation option before they commit to the action.

•FEATURE

- The Practo app prevents errors by verifying user inputs, such as their email address and phone number.
- The app displays clear error messages when users try to book appointments that are not available or exceed their budget.
- The app provides clear feedback when users search for doctors or clinics that do not match their criteria.
- The app provides suggestions and alternatives when users encounter errors or issues, such as recommending similar doctors or clinics.
- The app uses informative tooltips and help text to guide users through the booking process and prevent errors.

As an **existing user**, I want to use my Google login credentials so that I can access my account quicker.

Acceptance Criteria

Given I'm a logged out user, when I open the marketing site, click the 'Sign in with Google' button and enter my credentials in the username and password fields, the system then signs me in.

Search function

As a **logged-in user**, I want to be able to search through the website, so that I can find the information I'm looking for.

Acceptance criteria

Given I'm a logged-in user, when I select the Search icon, a search field will overlay on the middle of the screen with a blinking text cursor. When I enter my query into the search field, press the 'Go' button OR press the Enter key on the keyboard, then the system will show products in the Search Results section with pages that match the entered search query.

As a doctor consulting app, my users are typically individuals seeking medical advice and assistance from licensed and experienced physicians , may include individuals who are unable to visit a doctor in person due to physical limitations, geographical constraints, or busy schedules, may come from a wide range of backgrounds and age groups, and may have varying levels of health literacy and medical knowledge.

needs a way to

[Describe USER]

users of a doctor consulting app require a platform that is convenient, accessible, provides high-quality medical advice and assistance, effective communication, cost-effective, while also ensuring their privacy and security at all times.

surprisingly / because / but

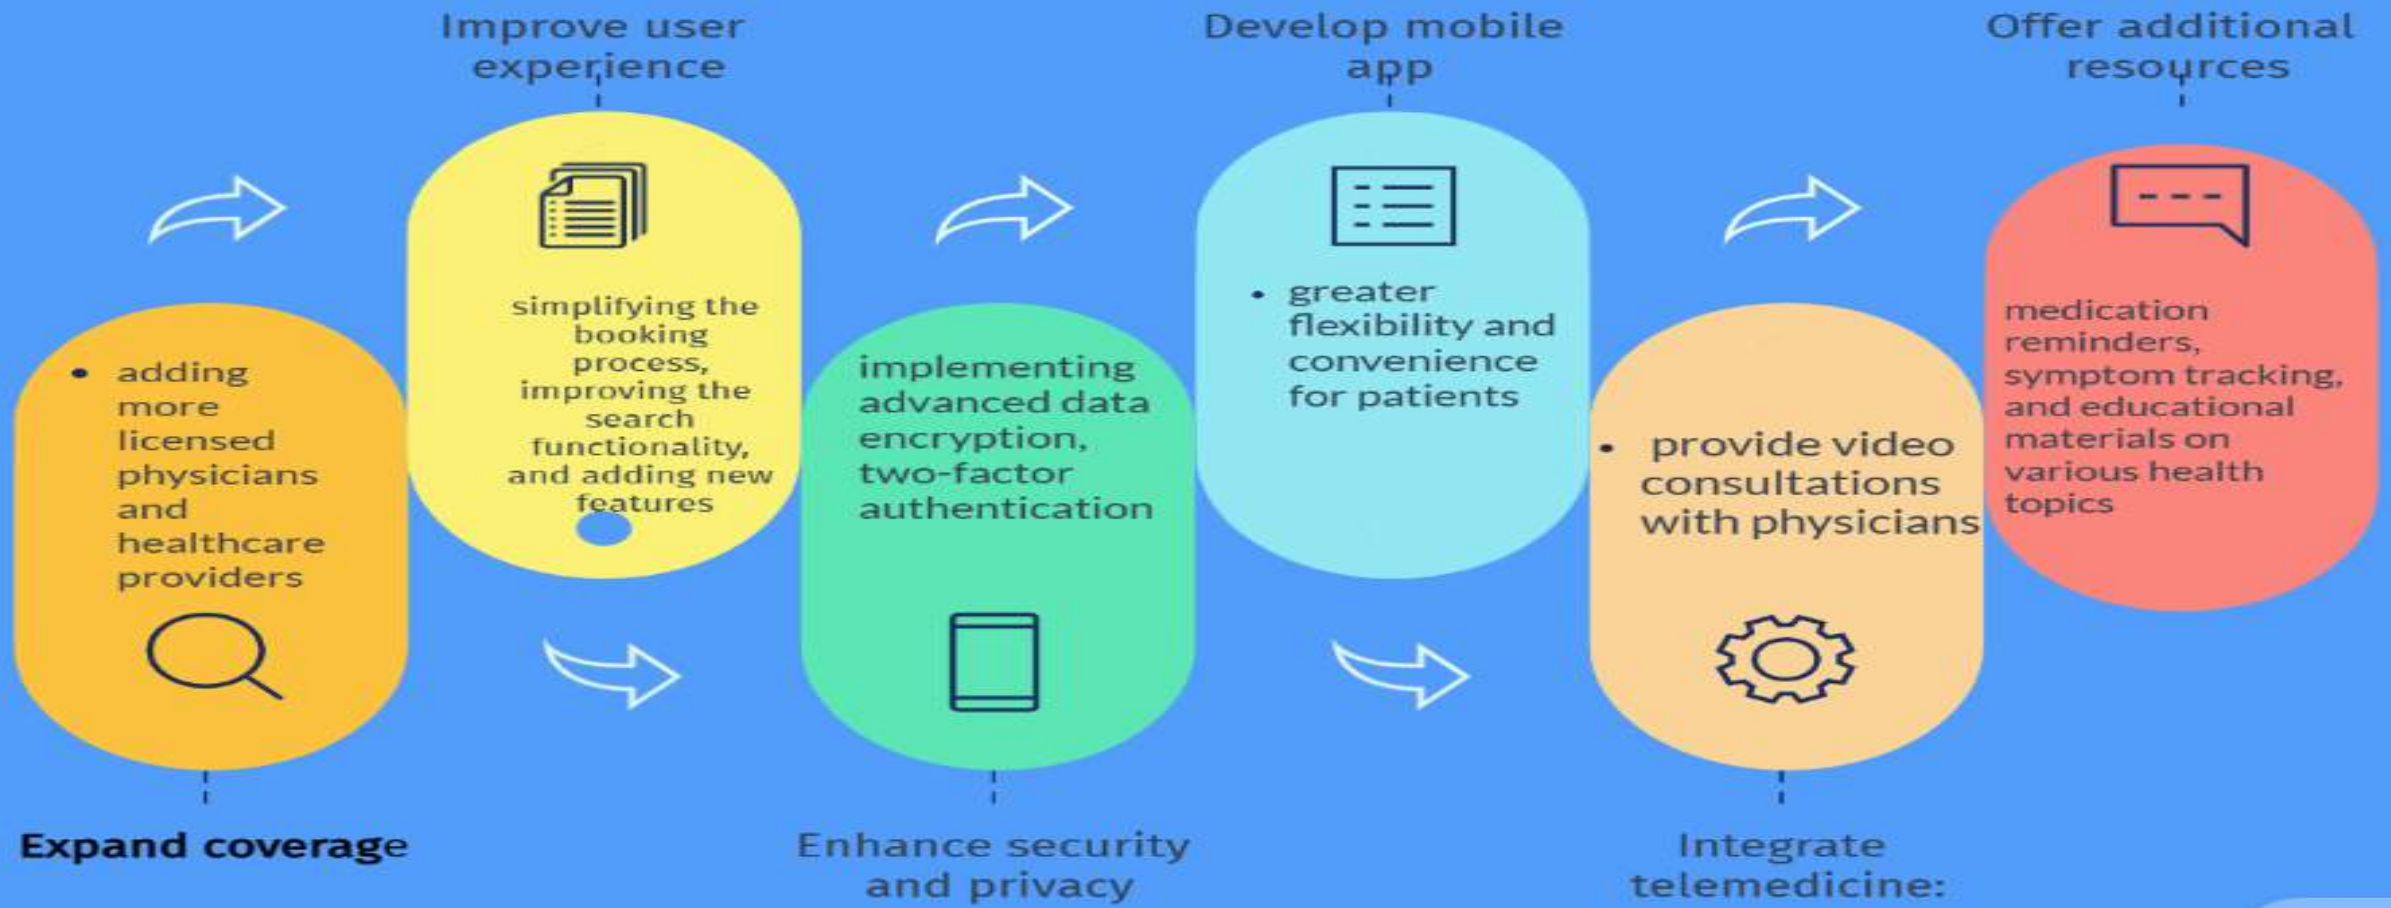

[user's NEED]

As a doctor consulting app, one key insight is that patients are seeking a more convenient and accessible way to access medical care and advice. Another insight is that patients value privacy and security when it comes to their personal and medical information. With the rise of online healthcare solutions, patients are increasingly concerned about the safety and confidentiality of their data. Finally, patients value quality of care and personalized attention from healthcare providers.

About Anjali

Caretaker

Anjali is 29 years old and she recently got married. She is very close to her parents but unfortunately they live in a city far away from her. She calls them up every day. She is a tech savvy person and tries her level best to take care of her parents. Her parents live in a tier 2-3 city and are aged.

Goals

- Easy way to know about parents well being
- Instant feedback during emergencies
- Ways to reduce the burden from their parents
- Cheap yet reliable health care providers
- Easy way for them to consult a doctor remotely
- Better and contextual health content to consume
- Remind parents to take medicines and go for a doctor visit

Age: 27 **Occupation:** Financial Banker

Location: Mumbai **Hometown:** Jamshedpur

Status: Recently married

Frustrations

- Communication is tough
- She many-a-times forgets to remind her parents
- Remote consulting is not possible
- Constant fear of parents well-being
- Finding new and better doctors is painful
- Maintaining parents' medical file is cumbersome

Devesh Thakur

“I need an easy way to look for the most trustable doctors nearby

Mobile phone he uses

Xiomi Redmi 2 (low end phone)

Most used apps on phone

About Devesh

Migrant

Devesh is 25 years old and recently shifted to Bangalore. He just passed from college and has a stable job now. He has low health immunity and gets ill frequently. Not living with his parents, he has to take care of his health himself. He is a tech savvy person and tries to keep himself healthy via going to gym regularly and eating well.

Goals

- To find a relevant doctor easily
- Trusted source of good health content
- Hassle free booking
- Quick and reliable treatment
- Easy way to manage bills
- Wants to get a treatment as soon as possible

Age: 25 **Occupation:** Software engineer

Location: Banglaore **Hometown:** Manali

Status: single

Frustrations

- Limited knowledge of locality since he is a migrant
- Not aware on how to judge whether a doctor/lab is good or not
- Lot of health information around, but none of them are easy to understand or relevant
- In-clinic experience is a huge hassle
- Long waiting line in clinics

Taran Singh

“Diabetes is painful, I want someone to reduce the pain of managing my health.

Mobile phone he uses

iPhone 6 (high end phone)

Most used apps on phone

Whatsapp, Call, Photos, Regional news (Dainik Jagran), Messages

About Taran

Chronic | Diabetes

Taran is 44 years old, and has a happy family. He lives in a tier 1 city and suffers from Diabetes. He has quite a hectic and responsibility filled job and personal life. His wife helps him with his health life. He is on the constant look-out for solutions to make her life easy. He needs to visit her doctor once in 3 months.

Goals

- Easy way to manage health records
- Help in planning doctor and lab visits
- Easy way to order medicines
- Consulting good doctors regularly
- Knowledge on how other diabetic patients live
- Better health content to consume

Age: 44 **Occupation:** Businessman

Location: Pune **Hometown:** Pune

Status: married (2 children)

Frustrations

- Medicines which doctor has prescribed is not easily available
- Forgets to take medicines sometimes due to his hectic schedule
- Not many good doctors in the city
- Managing his huge health file is a huge pain
- Long waiting line in clinics/labs

About me

I'm so happy to be pregnant, but very worried because I had a previous miscarriage. I've heard that there are more risks of complications for women who have their babies at my age. I also know I'll need to work very hard to keep this baby from coming prematurely. I expect I'll be put on bed rest later in my pregnancy.

Melissa

NEW EXPECTING MOTHER

Age: 34

Occupation: Executive Assistant

Education: Some College

Relationship: Married

Children: None

"It's been hard for us to get pregnant and I'm so worried I'll lose this baby."

Currently I feel...

Happy Concerned **Stressed** Busy

My healthcare goals

I want to have a healthy baby. It's been our dream for a year. I want to work with a doctor who understands how worried I am about this pregnancy and takes me seriously. I want to know about the risks of miscarriage during my pregnancy. I want to feel like I can call my doctor with concerns. My doctor should help me know what I should be doing to stay healthy during my pregnancy.

Booking an appointment with a doctor:

A user can open the Practo app, select the specialty of the doctor they want to consult and the location where they want to visit the doctor. The app will show a list of doctors with their ratings, experience, and consultation fees. The user can choose a doctor, check their availability, and book an appointment with the doctor. They can also choose to consult the doctor online through video consultation.

Ordering medicines:

A user can order medicines through the Practo app by uploading a picture of their prescription or searching for medicines in the app. The app will show the available medicines with their prices, and the user can add the required medicines to their cart and proceed to checkout. They can choose to pay online or opt for cash on delivery.

Tracking health records:

Practo allows users to maintain their health records on the app. Users can upload their medical reports, prescriptions, and other health-related documents to the app and access them whenever required. This feature is helpful for people who need to keep track of their medical history or have chronic illnesses.

Searching for diagnostic centers:

A user can search for diagnostic centers near their location through the Practo app. The app will show a list of diagnostic centers with their ratings, prices, and available tests. The user can choose a center and book a test by selecting the date and time of their preference. They can also opt for home sample collection.

Consultation with a nutritionist:

Practo also provides users with the option to consult with a nutritionist for their dietary needs. Users can book an appointment with a nutritionist, provide their details and health concerns. Based on the information provided, the nutritionist will create a personalized diet plan and provide consultation on how to maintain a healthy lifestyle.

Usability Test Plan

The template consists of a generic test plan including Copy this page to your test project wiki and adapt it to your session requirements as you see fit.

► About Practo app (Features)

Practo has created a platform that allows patients to communicate with healthcare professionals, doctors, and nurses. This app is one of the fastest growing healthcare software which provides a platform for patients to connect with their required healthcare experts. The technology is developed to keep patients' data secure through cloud technology. This ensures that online patient records are always up to date and easily available to healthcare practitioners. The service users can book new appointments, check their treatment progress or corresponding records, and take care of accounting and payment services that can be performed online.

Redesign

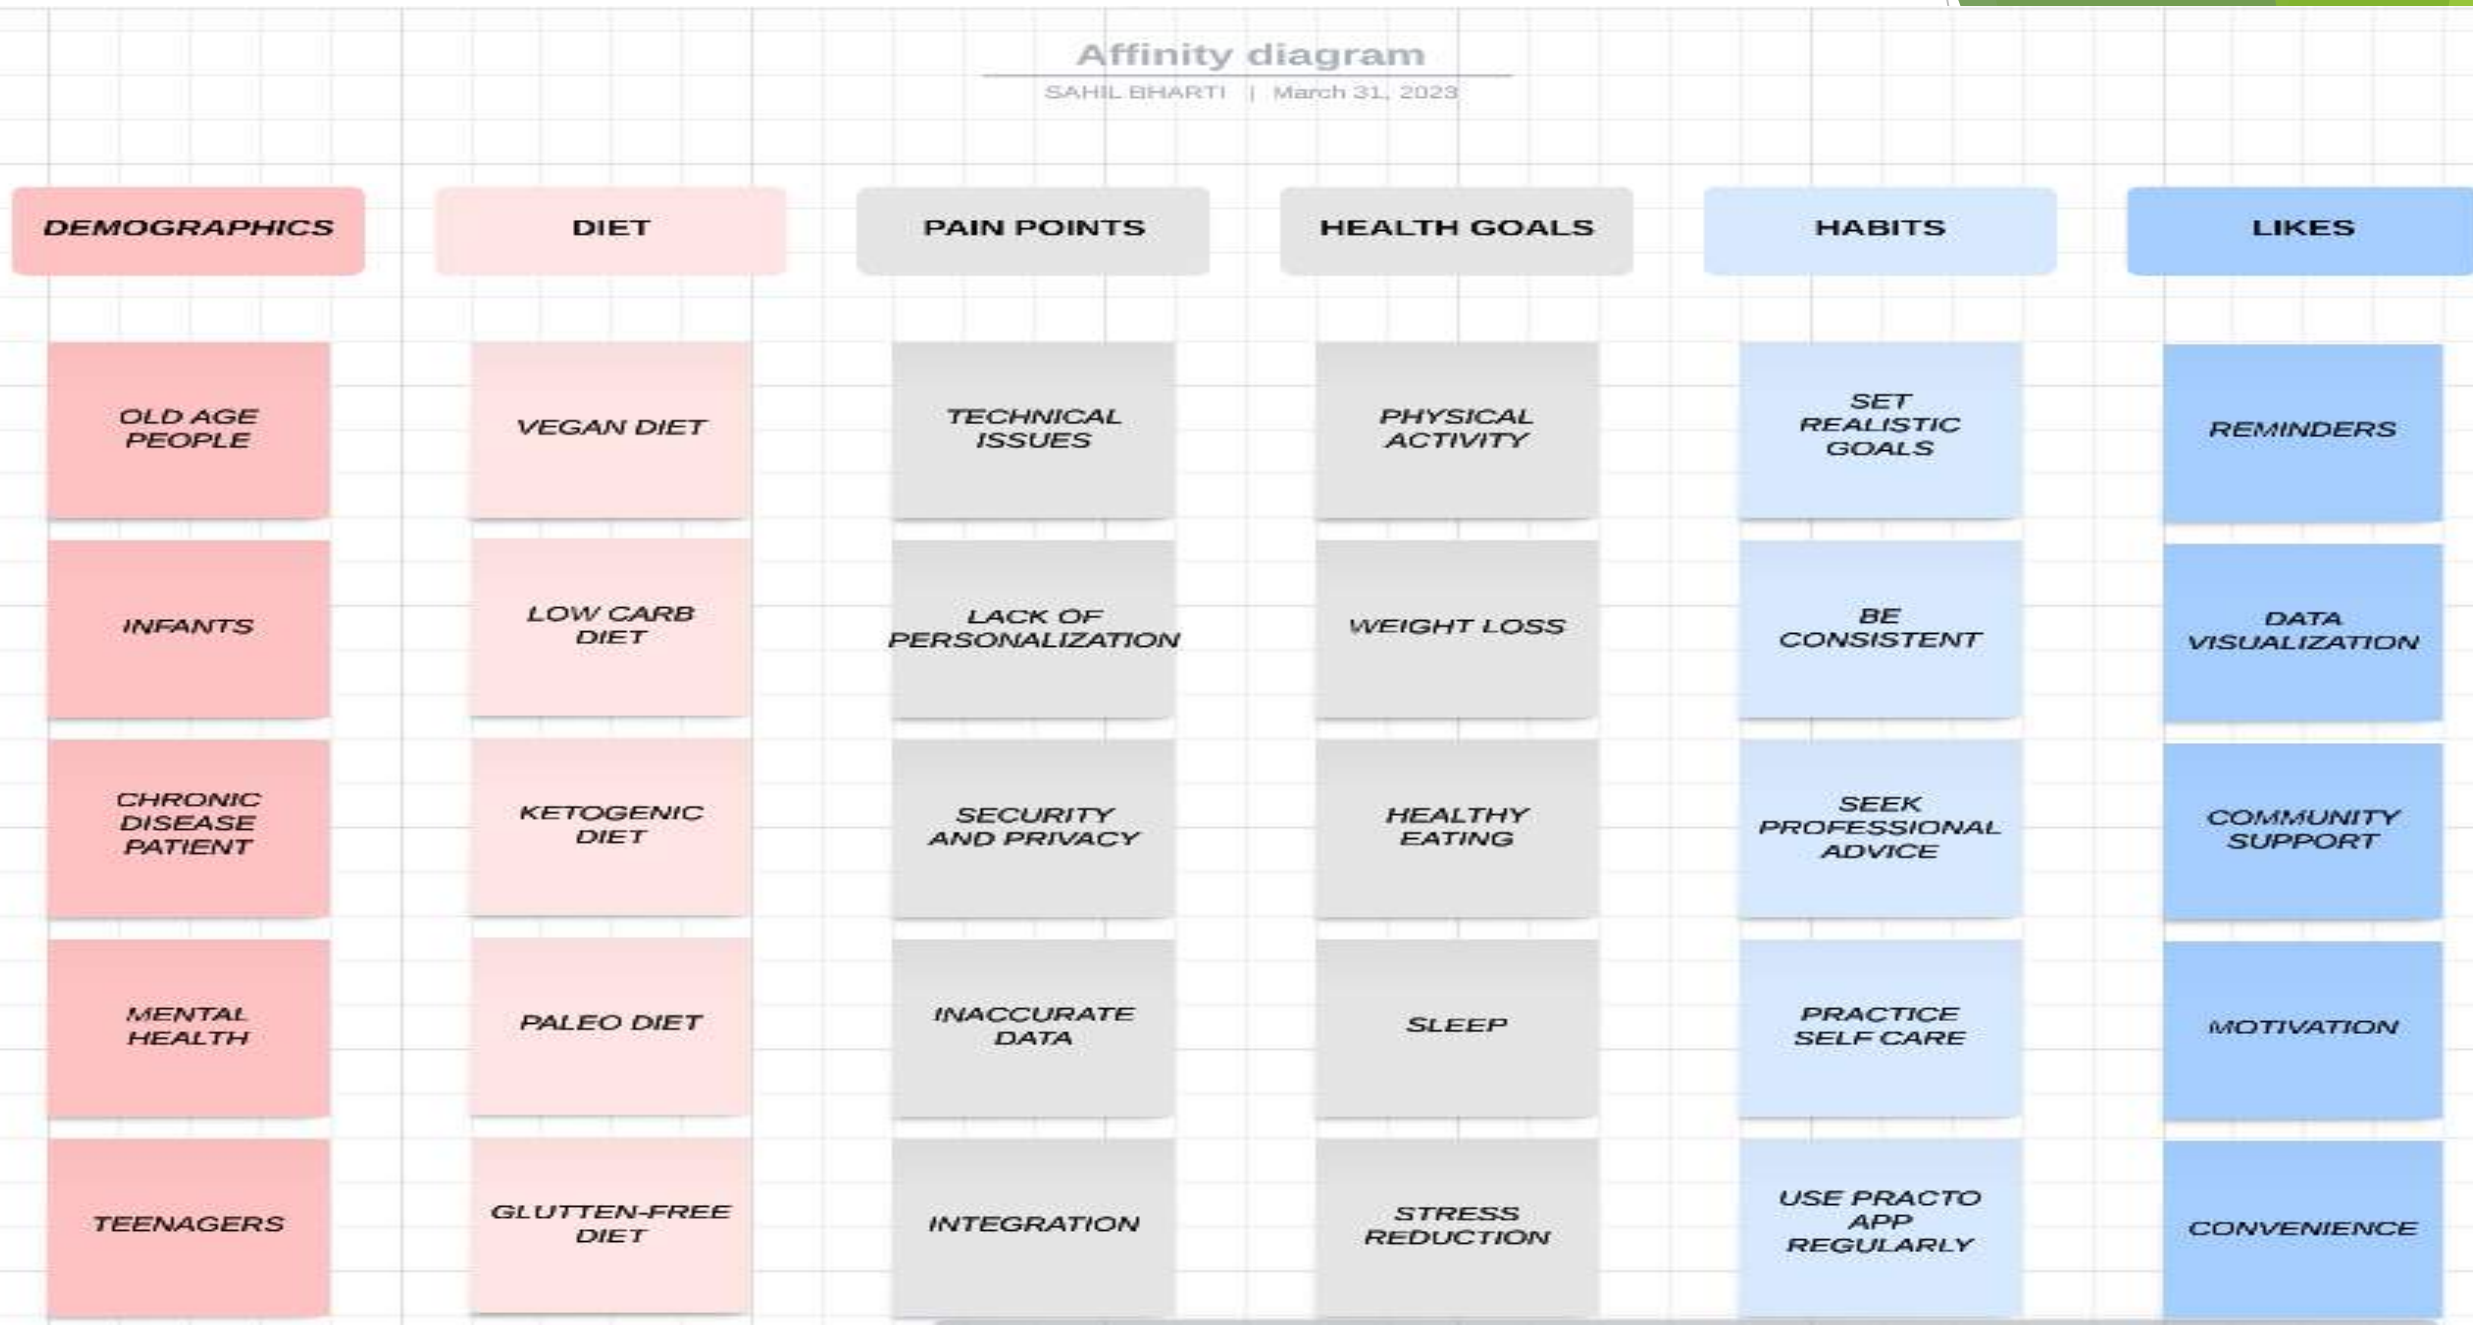

Use BMI(Body Mass Index) to find user are healthy or not (weight and height).

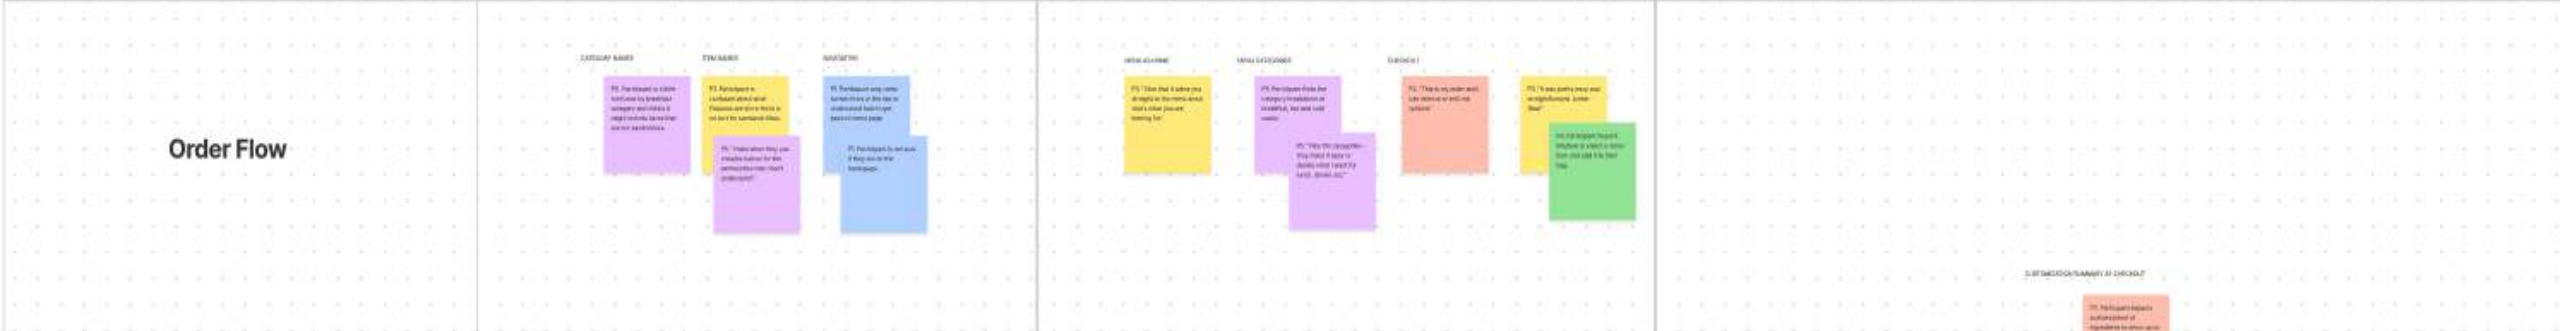

For few Guidance Consult a Doctor over chat/call/video conferencing instantly(Virtual assistant).

Patient can easily get idea about their food(Daily uses).

To get free of cost service for poor patients from doctor, we will tie-up with any Trust.

1. Affinity diagram

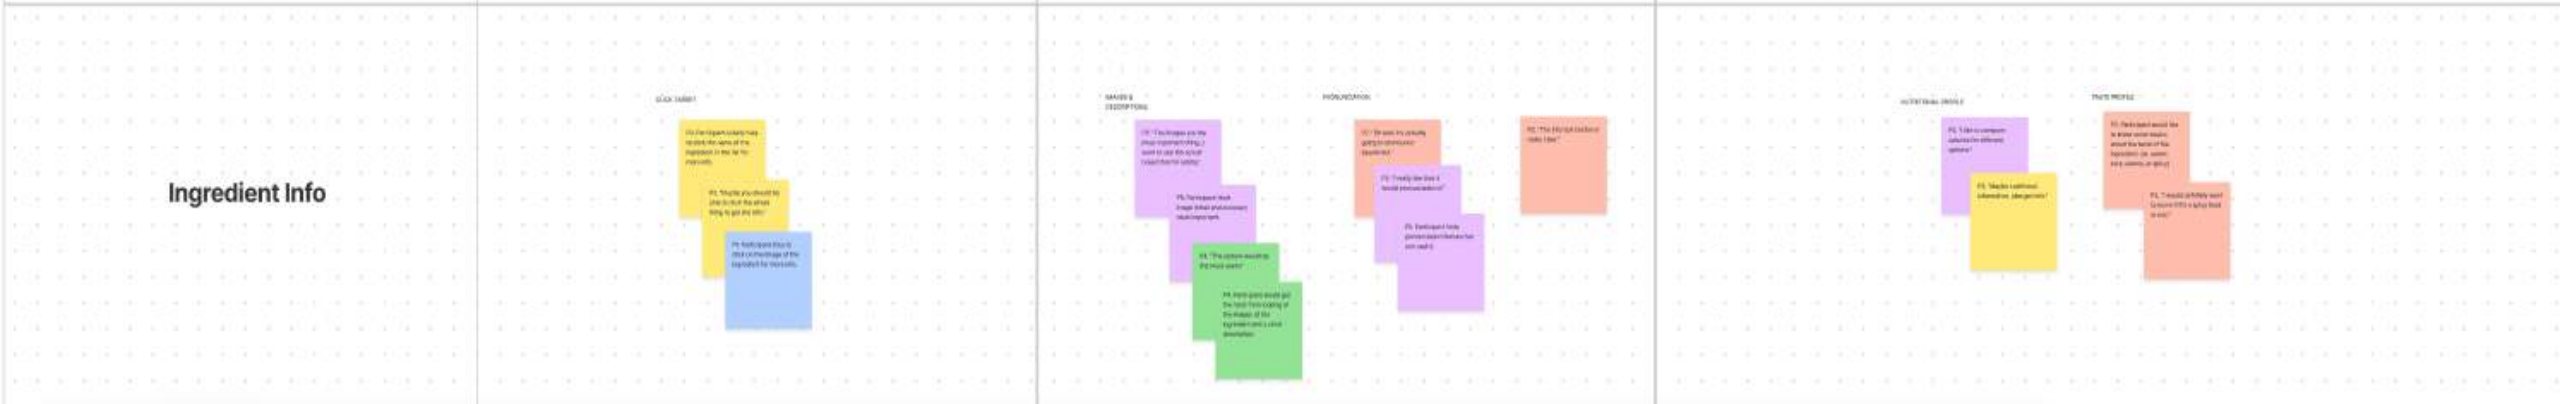

[illegible][illegible]

The diagram illustrates the flow of information for Order Customization. It is structured as follows:

- Order Customization** (Left side)
- Customer Flow** (Middle section):
 - Flow 1: "Your selection of equipment is really clear!" (Yellow box)
 - Flow 2: "I have a question about the equipment you selected. Can you help me?" (Purple box)
 - Flow 3: "I have a question about the equipment you selected. Can you help me?" (Orange box)
- Ability to Service Initial Requirement?** (Right side):
 - Flow 4: "I have a question about the equipment you selected. Can you help me?" (Green box)
 - Flow 5: "I have a question about the equipment you selected. Can you help me?" (Orange box)

The flow is represented by a series of colored boxes and arrows, indicating the sequence of information exchange between the customer and the service provider.

[illegible]

Data Bank

Duplicates sorted above

P1. Participant tries to click on the image of the ingredient for more info.

P1. "I couldn't like find it (e.g. filter icon)."

P2. Participant expects customization of ingredients to show up on the order preview screen.

P2. "This is my order and I can remove or edit the options"

P3. - Participant is confused about what Features are since there is no text for sandwich titles.

P2. "This is my order and I can remove or edit the options"

P3. "Remove any items from the menu that has peanuts or have the ingredients with peanuts default to something else...prefer not to have it removed entirely...and just having a warning next to the ingredient"

P4. Participant found it intuitive to go select and menu item and add it to their bag.

P4. "I really don't like cheese and I want to remove the default cheese all together."

P5. Participant is a little confused by breakfast category and thinks it might include items that are not sandwiches.

P5. "I hate when they use creative names for the sandwiches that I don't understand"

P1. Participant may read screen titles at the top to understand how to get back to home page

P1. "Maybe give me a notification on the food when I am selecting it."

P2. Participant is not sure about the location and filters at the top of the menu item page and if/how it would effect the menu item page.

"If I had specific selections it should probably show it there (checked)."

P3. Participant initially tries to click the name of the ingredient in the list for more info.

P3. "Your selection of ingredients is pretty clear"

P3. "I think you would find it eventually but you have to explore the different buttons and options in the app before you find it."

P4. Participant would like to remove default selections altogether from some ingredient categories (e.g. cheese)

P4. "The picture would be the most useful"

P5. Participant finds the category breakdown of breakfast, hot and cold useful.

P5. "I really like that it would pronunciation it."

P1. Participant is not sure if they are on the homepage.

P1. "Maybe it deletes them from the list of the foods that I can see."

P2. Participant would like to know some basics about the taste of the ingredient. (i.e. sweet, sour, savory, or spicy)

"Familiar patterns make it easy for me as the user."

P3. Participant expects allergies to be setup in the profile settings and at checkout.

P3. "Maybe you should be able to click the whole thing to get the info."

P3. "If there is an account feature then you would have it for the next time you order."

P4. Participant would get the most from looking at the images of the ingredient and a short description.

P4. "If I didn't find it there the next thing I would do is look in the profile to see if I could add it."

P5. Participant finds image detail and accuracy most important.

P5. "I like to compare calories for different options."

P1. Participant is not sure where to add food allergies.

P2. Participant might go to account settings for food preferences they want to save but would use the filter icon to filter down the list.

P2. "Oh look it's actually going to pronounce 'sausage'."

P3. Participant expects to see some salient info on the items/ingredients about any selected allergies.

P3. "Maybe nutritional information, allergen info."

P3. "Maybe have a notes section at the end of the order to make sure there isn't something you missed"

P4. Participant would prefer to have ingredients with peanuts substituted with some warning on the rather than loose the menu items entirely. (i.e. maximize options)

P4. "I would expect it to remove the menu items or gray them out after I click the menu item...or remove the ingredient that has the allergy in it so I can still get the menu item."

P5. Participant finds pronunciation feature fun and useful.

P5. "The images are the most important thing...I want to see the actual bread that I'm eating."

P2. Participant expects some feedback on the list to show that it filters down some options.

P2. "I would definitely want to know if it's a spicy food or not."

P3. "It was pretty easy and straightforward. (order flow)"

P3. "Maybe it could be specific to the order...you could add it to the order somehow."

P3. "Being able to highlight what foods cause the allergy and making it very obvious...making it a red color or something to show it's dangerous."

P4. Participant feels more confident his allergy info is revealed since the feature is so prominent.

P4. "Usually when you are checking out there is some place to add comments but you have to rely on them to read it and it can be risky, sometimes I call to make sure they saw it."

P5. Participant expects the menu to switch to a list of items that are allergy friendly and filter down as more allergies are selected.

P5. "I would imagine that the menu options switch after I select peanut allergy to only show me sandwiches without any peanuts in them and removed the categories."

P2. Participant expects some persistent indication about what filters are active.

P2. "I could use the filters to filter down to something."

P3. "I like that it takes you straight to the menu since that's what you are looking for"

P3. "Maybe if you are ordering for multiple people you might add it as a note to the order if only one person has the allergy"

P4. "The fact that allergies was built into the app I feel more confident that they will acknowledge the allergy and I won't have to call them."

P5. "I like the categories - they make it easy to decide what I want for lunch, dinner, etc."

P5. "I would imagine adding allergies later while customizing an option but maybe because I don't have any allergies"

P5. "Makes sense to start with bread and boxes first and then add toppings"

Explain how an Affinity diagram can be used to organize data related to the Practo app.

An affinity diagram is a tool used to organize and analyze large amounts of data or ideas. It is commonly used in design thinking, project management, and problem-solving processes.

First, you need to gather all the data related to the Practo app. This can include user feedback, reviews, complaints, suggestions, and any other information that can help improve the app's user experience.

Next, you can group similar data together and write them on sticky notes or cards. For example, if multiple users have suggested adding a feature to book appointments for multiple family members, you can group those suggestions together.

Then, you can start placing these sticky notes or cards on a board or wall in a way that makes sense to you. You can group related items together and label each group. For example, you can group all the suggestions related to booking appointments under a "booking" category.

Finally, you can analyze the affinity diagram to identify common themes, patterns, and trends. This can help you understand the users' needs and pain points, which can inform your design and development decisions.

2. Concept Development

Practo is a healthcare app that allows users to find doctors, book appointments, order medicines and perform other health-related activities. The app is designed to provide easy and convenient access to healthcare services to people.

Here are some ideas for concept development on the Practo app:

1. **Personalized Health Dashboard:** The app can provide users with a personalized health dashboard that will show them their health data like BMI, weight, blood pressure, etc. The dashboard can also give users recommendations on how to improve their health.
2. **Symptom Checker:** The app can have a symptom checker feature where users can enter their symptoms and get possible causes and remedies. The symptom checker can also help users understand when they should seek medical attention.
3. **Telemedicine:** The app can have a telemedicine feature where users can consult with doctors through video or voice calls. This will allow users to consult with doctors from the comfort of their homes.
4. **Medicine Reminder:** The app can have a medicine reminder feature where users can set reminders for their medicines. The app can also send notifications to users when it's time to take their medicines.

5. Health Articles and News: The app can have a health articles and news section where users can read about the latest health news, research, and tips for a healthy lifestyle.

6. Emergency Services: The app can have a feature where users can quickly access emergency services like ambulance, hospital, and emergency contacts.

7. Health Record: The app can provide users with a health record feature where they can store their health data like medical history, reports, and prescriptions. This will allow users to easily access their health data whenever they need it.

8. Health Challenges: The app can have a health challenges section where users can participate in challenges related to health and fitness. Users can also compete with their friends and family to motivate themselves to stay healthy.

9. Health Insurance: The app can provide users with information on health insurance and help them choose the right health insurance plan based on their needs.

10. Healthy Recipes: The app can have a healthy recipe section where users can find healthy recipes that are easy to make. The app can also provide users with a grocery list for the ingredients needed to make the recipe.

3. Paper prototype (presented in A4 Sheet)

Nya

Age 34
Occupation School Teacher
Education Graduate
Marital Status Married
Location Sacramento, CA
Hobbies Ceramics

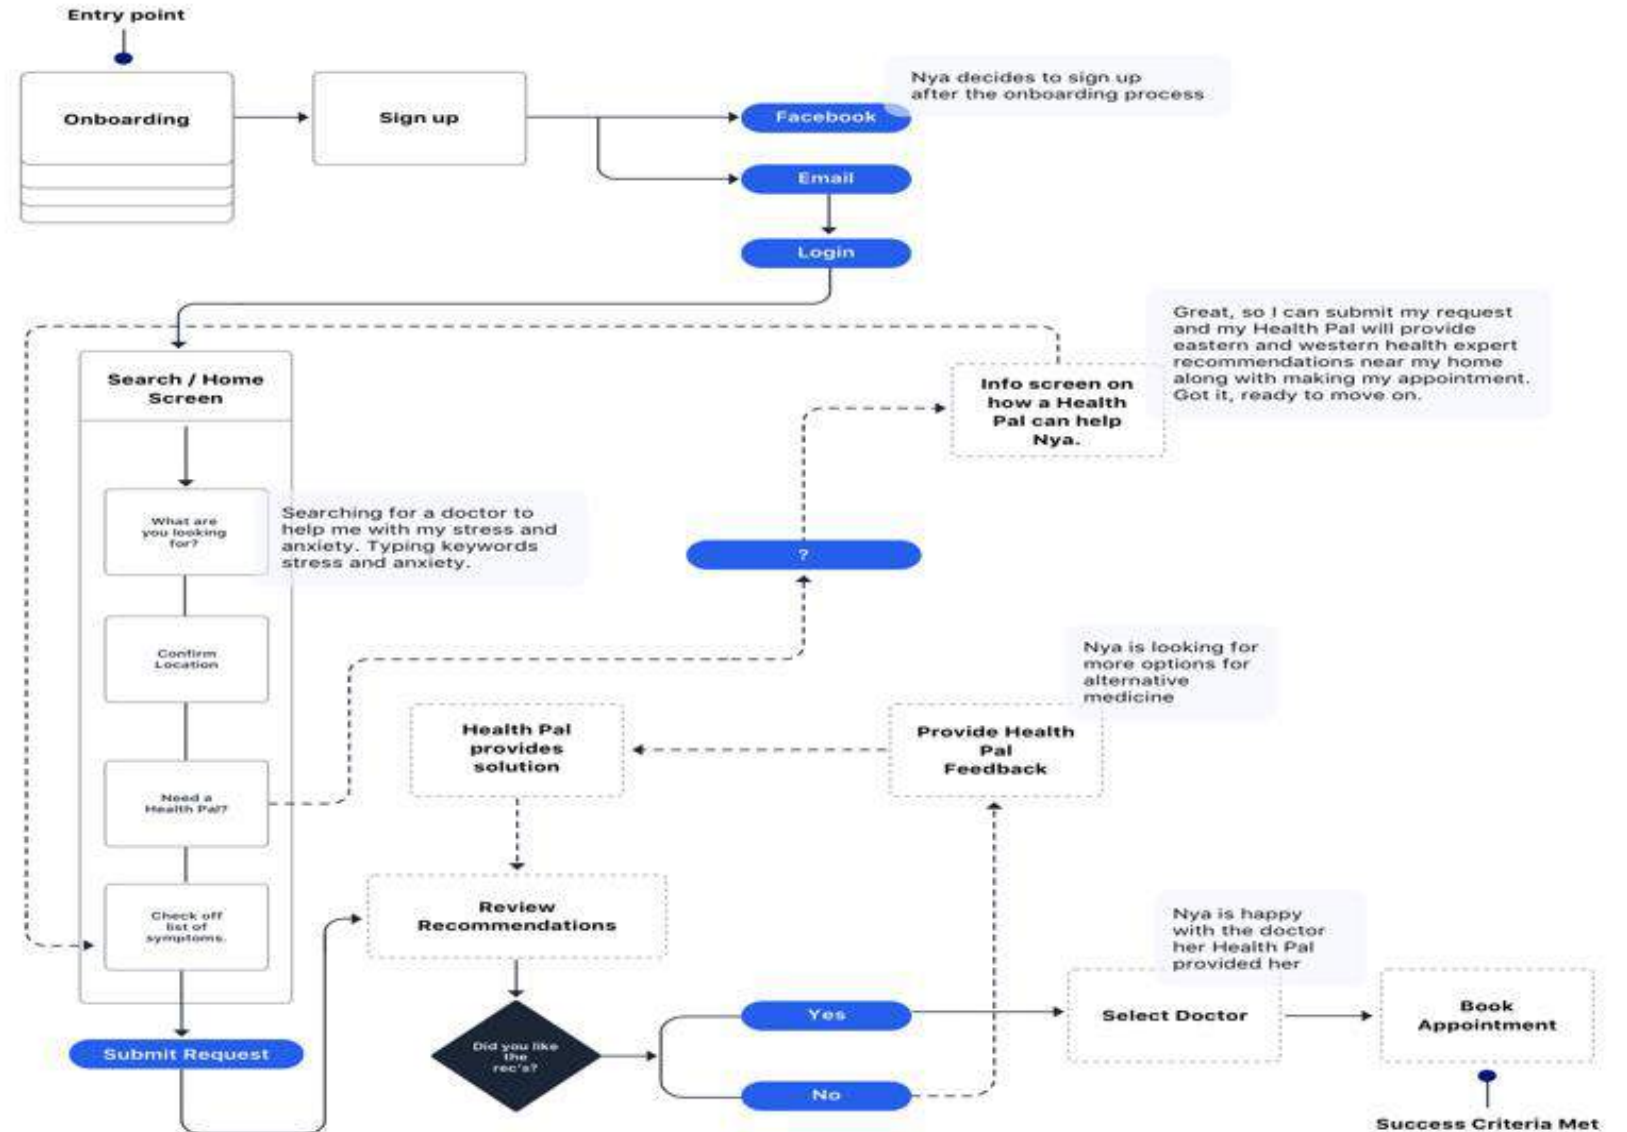

Objective

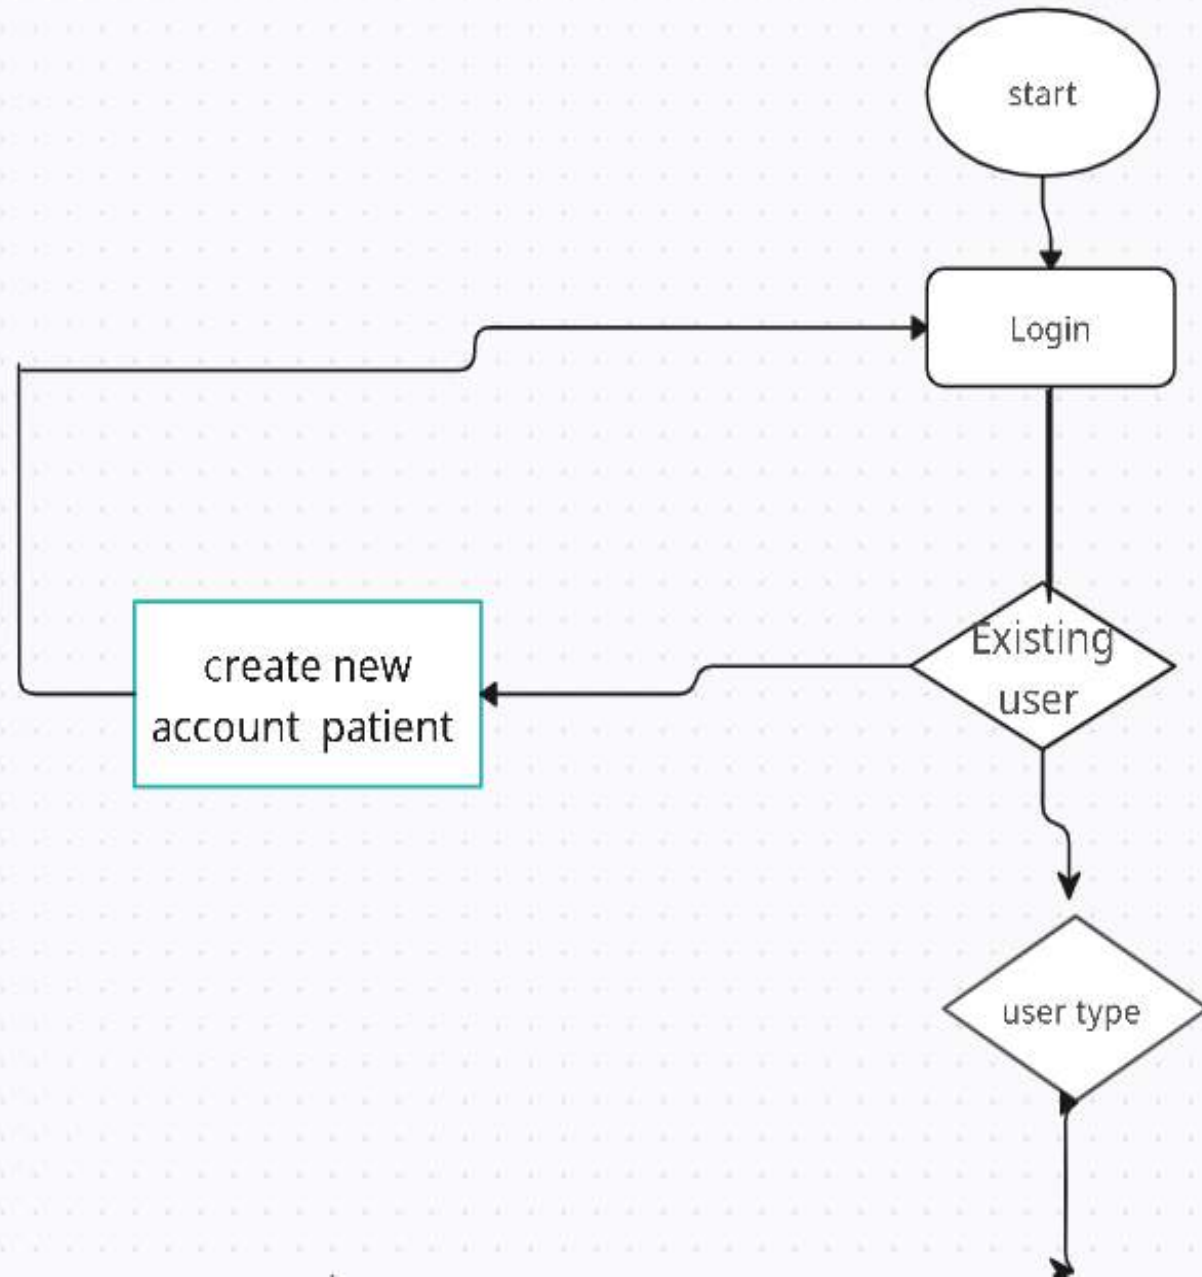

As a Teacher, I want to ask a health question to a health pal, so that I can receive eastern and western medical treatment recommendations to treat my condition, and after making a selection, for a health pal to arrange my appointment for me.

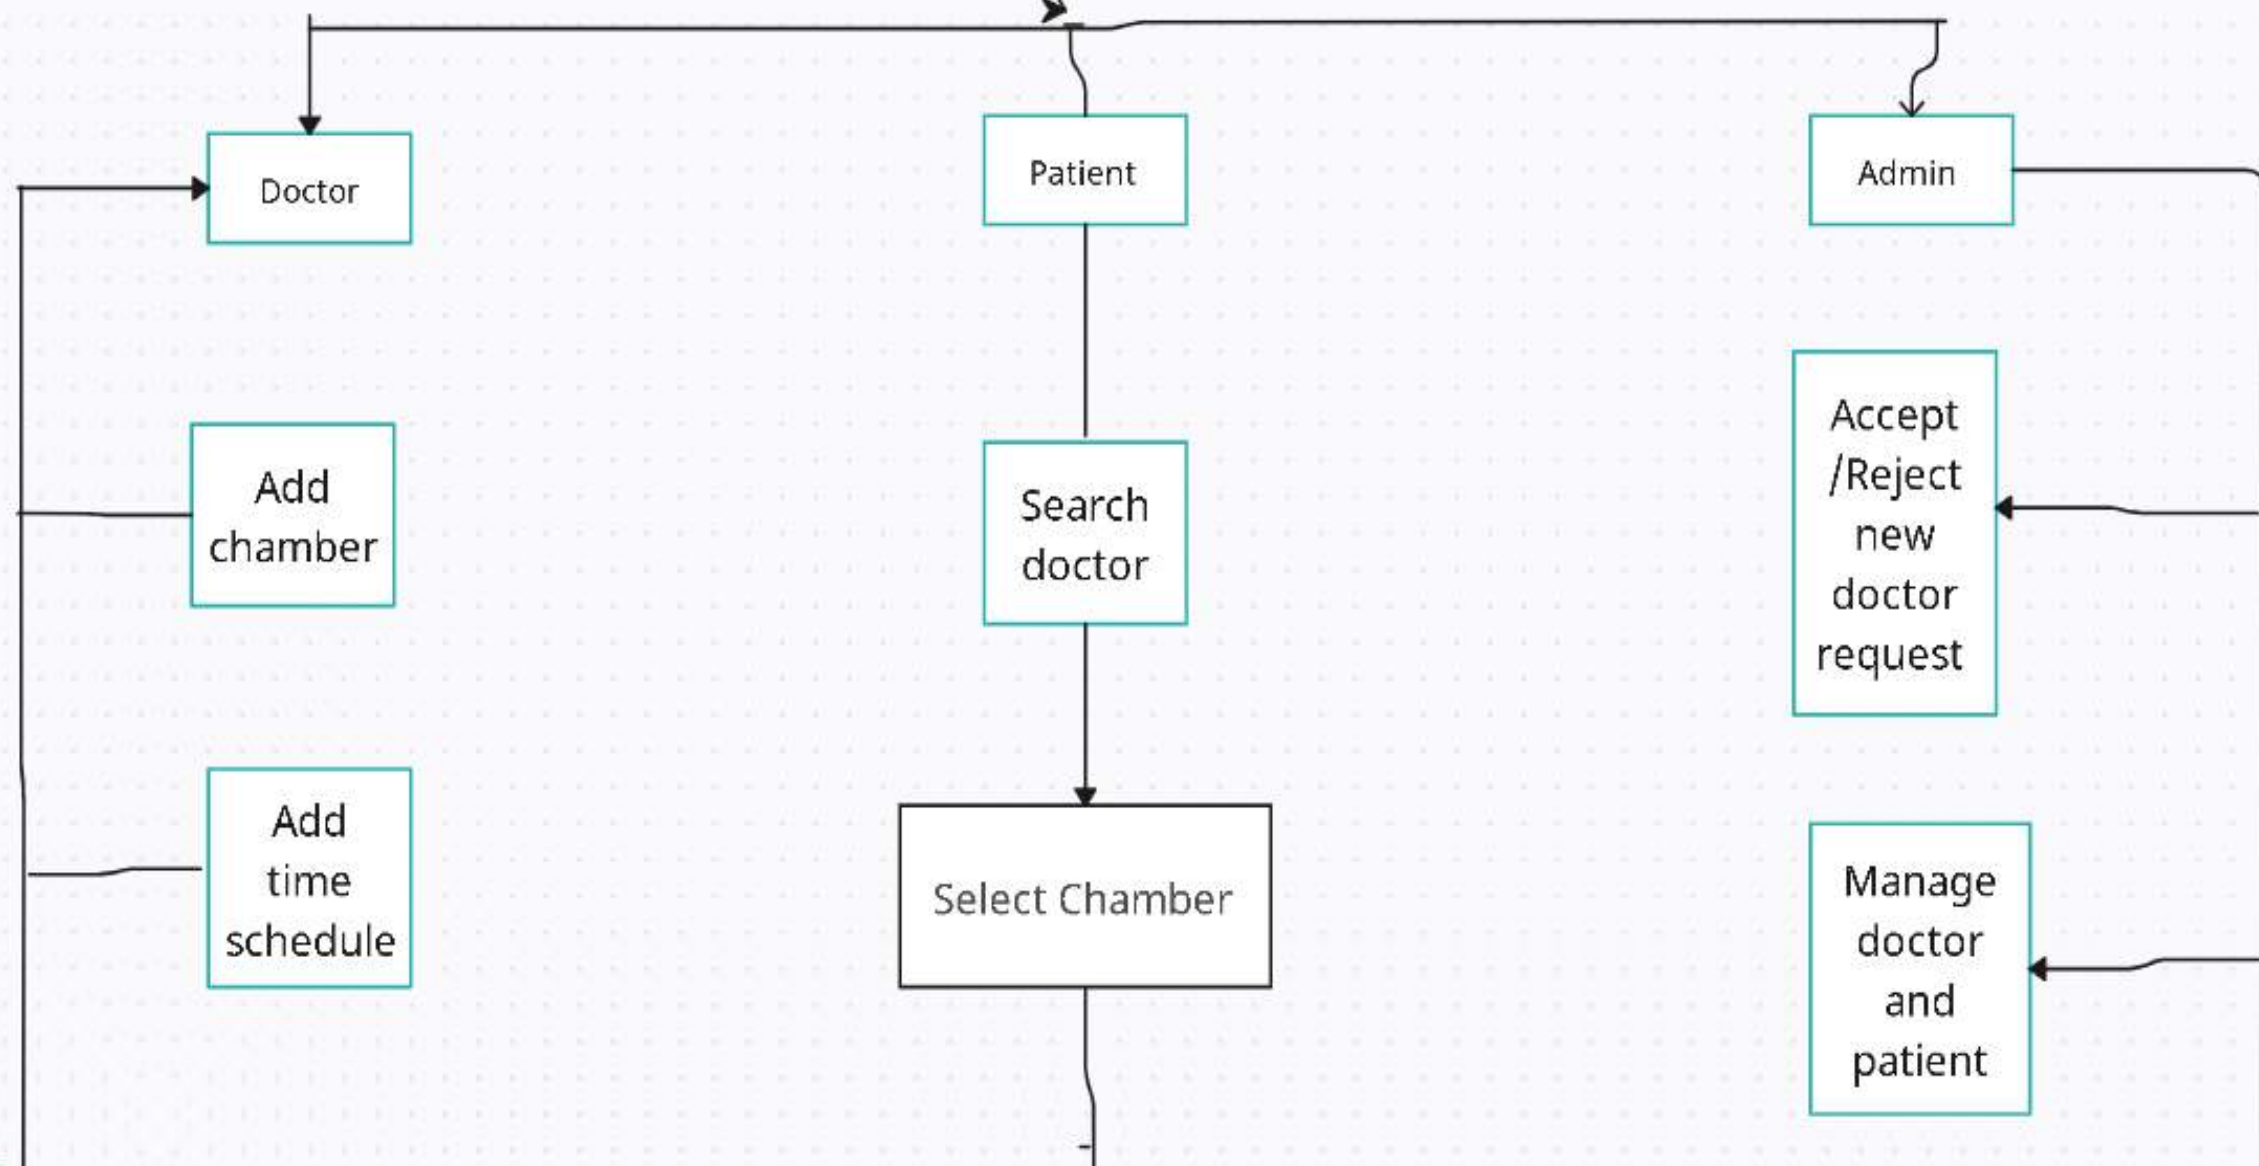

Task Analysis

- Onboard
- Sign in
- Tap search tab, bottom nav
- Ask health question to Health Pal
- Describe symptoms
- Confirm location
- Health Pal provides recommendations after calling health expert offices to confirm they can treat your symptoms
- Review eastern and western medical treatment recommendations
- Select the doctor that fits your needs
- Book the appointment yourself or have a Health Pal do it for you
